**Turnover indices of retail trade, constant price
- Republic of Serbia -**

The retail trade turnover of the Republic of Serbia in the 4th quarter 2005, compared to the same quarter 2004, rose by 51.6% at current prices, in Central Serbia by 45.9% and in Vojvodina by 69.2%. In 2005, compared to 2004, in the Republic of Serbia the turnover at current prices saw a 52% increase; in the central Serbia it rose by 45% and in Vojvodina by 73.8%.

Notes: The indices published in this communication have been obtained from the Quarterly Survey of Retail Trade (Trg-16), the survey that has been carried out since 2003 on the sample of chosen enterprises of all types of property. The units observed are trade enterprises, as well as those enterprises not featuring trade as the prevailing (principal) activity, however including business units that deal in retail trade. The data are collected according to the Classification of Activities (CA) and therefore all retail trade sub-groups are comprised, except services.

Retail trade turnover presents the value of the sold goods, those that were sold (delivered) to end-users, in the first place to the population for personal consumption and household usage, as well as to legal and physical persons for business purposes.

The value of retail trade turnover since 1 January 2005 includes the VAT, unlike the previous period (basis) when the turnover tax was included.

Turnover indices at constant prices are obtained by deflating the indices at current prices by corresponding indices of retail prices, electricity excluded.
