In September 2006, compared to August 2006, turnover of goods decreased by 0.3 % at current prices and increased by 0.3 % at constant prices.

Comparing the period January- September 2006 with the same period 2005, turnover of goods grew by 24.6 % at current prices and by 9.1 % at constant prices.

Note on the published data

Indices published in this communication have been obtained from the regular monthly statistical survey "Monthly Survey of Retail Trade" (TRG-10), which has been carried out since January 2003 on the sample of selected enterprises of all types of ownership that deal with retail trade, regardless whether retail trade is their main activity or not. Sample purposely includes big enterprises, on the basis of accomplished turnover retail trade in the previous period, while others have been chosen by the random sample method.

The value of retail trade turnover since January 1st 2005 also includes the value added tax (VAT).

Indices of retail trade at constant prices have been obtained by deflating indices at current prices by corresponding price indices of retail trade, excluding electricity.

All published indices should be treated as previous data, meaning that certain corrections are possible, on the basis of the results obtained from the quarterly statistical survey "Quarterly Survey of Retail Trade" (TRG- 16), published as a separate communication.
