## Issued building permits in the Republic of Serbia, April 2010

### – Preliminary results –

On the basis of the number of issued permits in April 2010, building of 790 dwellings with average area of 75.9 m<sup>2</sup> was recorded. Number of dwellings decreased, according to the issued permits, by 48.3% when compared to April 2009. Out of the total number of dwellings in new residential buildings, 23.2% of dwellings will be built in single – dwelling buildings, with average area of 122.7 m<sup>2</sup>, while 70.1% of dwellings will be in the buildings with three and more dwellings, with significantly smaller average area of 59.4 m<sup>2</sup>.

In April 2010, 531 building permits were issued, presenting the decrease of 30.7% when compared to April 2009. Index of anticipated value of works in April 2010 is by 52.7% lower than in April 2009.

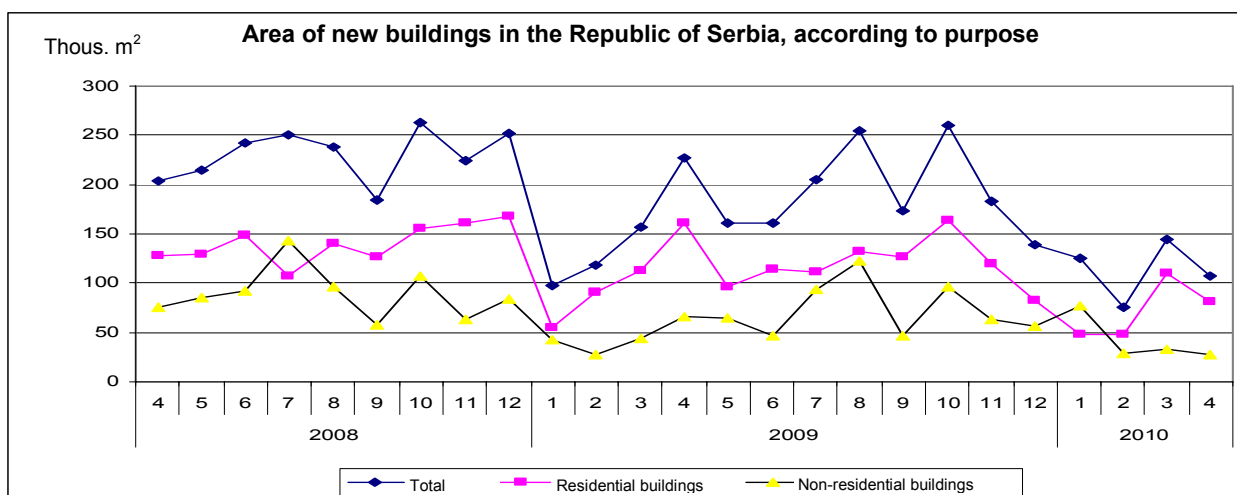

Observed by types of constructions, in April 2010, 83.1% of issued permits related to buildings and 16.9% to civil engineering. When referring only to buildings, 76.4% related to residential buildings and 23.6% to non-residential ones, while regarding civil engineering, the largest number related to pipelines, communication and electric power lines, 80%.

Anticipated value of works on new building in April 2010 amounts to 85% of totally anticipated value of works. Observed by districts, the greatest construction activity was noted in the city of Belgrade and amounted to 32.8% of anticipated value of works on new building. It is followed by South Backa District (9.7%), Branicevo District (8.5%), Srem District (8.0%) and Rasina District (5.3%), while shares of other districts were smaller, ranging from 0.2% to 3.9%.

Besides the presented data, detailed monthly data regarding this activity are available on the website of the Office [www.stat.gov.rs](http://www.stat.gov.rs) (Construction Activity and databases).

	$\frac{I-IV\ 2010}{I-IV\ 2009}$	$\frac{IV\ 2010}{III\ 2010}$	$\frac{IV\ 2010}{IV\ 2009}$	$\frac{IV\ 2010}{\emptyset\ 2009}$
Total				
Number	68,9	102,7	69,3	78,7
Anticipated value of works	73,3	74,7	47,3	47,0
Buildings				
Number	69,3	103,3	69,2	80,8
Anticipated value of works	76,5	73,8	45,4	57,3
Area	75,0	75,9	49,1	60,4
Volume	69,0	74,2	42,6	54,5
Civil engineering				
Number	67,5	100,0	69,8	69,2
Anticipated value of works	57,0	80,0	61,0	23,8
Dwellings				
Number	69,9	60,8	51,7	62,2
Useful area	68,0	76,6	55,1	70,6

**Notes:**

The presented data are collected in the scope of monthly survey on building permits. The report is filled by the Ministry competent for construction affairs, responsible authorities of the Autonomous Province, city or municipality that, according to the Law on planning and construction (“Official Journal of the Republic of Serbia“, number 72/2009, article 133), issue construction permits.

In the scope of this survey, the concept of „building permits“ unites three documents issued by the competent authority: building permit for construction, request for starting works and the decision which approves the execution of works.

This statistical survey comprises the issued building permits for all types of constructions described in the Classification of Types of Constructions, i.e. buildings and other civil engineering works and these are presented by territories where the works are performed.

Data on issued building permits show the dynamics of construction activity and enable an insight in investments’ structure on state and local self – government level.

A **construction** comprises construction connected with the ground (any underground, over ground, as well as hydro technical structure – water works), for which construction works are performed, made of construction material, building – in finished products and parts. Land works, related to preparation of the surface, sowing or seeding are agriculture-related activities and are not included in construction works.

**Buildings** refer to permanent constructions containing roof and outer walls, constructed as separate units that provide protection from weather and other outside effects, with the purpose of living, performing some activities or keeping animals, goods and equipment needed for versatile production or service activities.

Buildings also comprise constructions that contain roof but without all walls (e.g. eaves), as well as constructions that are prevalingly or completely placed under the ground surface (shelters, underground garages, shops or other business premises placed in subways, etc.).

**Other civil engineering constructions** relate to all constructions that are not buildings: railways, roads, bridges, highways, airport runways, pools, etc.

**Gross building area (m<sup>2</sup>)** presents the sum of all floor areas in the building that are comprised by outer walls, also including the thickness of outer walls.

**Useful dwelling area** is the floor area, measured inside the outer walls of the dwelling and presents the sum of all floor areas, rooms, kitchen, bathroom, toilet and other auxiliary spaces in the dwelling.

**Anticipated value of works** presents the planed value of works on a construction.

Detailed methodological notes of this survey can be found in the edition of SORS Methodologies and standards: Monthly surveys on building permits, book 22 and Classification of types of constructions, book number 15.

Since 1999, the Statistical Office of the Republic of Serbia doesn’t dispose of certain data for AP Kosovo and Metohia, so they are not contained in the data coverage for the Republic of Serbia (total).
