Quarterly Gross Domestic Product, at constant prices 2002 - 3rd Quarter 2010 -

The Statistical Office of the Republic of Serbia communicates the results of the quarterly calculations of the gross domestic product of the Republic of Serbia, at constant prices (base year 2002), derived according to production approach. The data in the tables represent the level and extent of changes of all economic activities engaged in gross domestic product generation.

Quarterly gross domestic product (GDP) time series have been revised in accordance with the latest officially published data in the statistical system and adjusted according to the preliminary annual GDP data for 2009, at constant prices 2002.

In the 3rd quarter of 2010, GDP increased by 2.7% in comparison to the corresponding period of the previous year.

Compared to the corresponding period of the previous year, gross domestic product (GDP) in nine months of 2010 increased by 1.7%

Observed by activities, in the third quarter 2010, the highest growth in the gross value added was noted as follows: the section of financial intermediation – 8.7%, the section of transport – 7.4%, the section of mining and quarrying – 6.2%, the section of trade – 6.2%, and in the section of manufacturing – 5.0%. The highest fall in the gross value added was recorded in the section of construction – 9.2%, and the section of electricity, gas and water supply – 4.4%.

Seasonally adjusted GDP data, at constant prices 2002, in the third quarter of 2010, increased by 1.6%, in comparison to the second quarter of 2010.

1. Gross value added by activities and gross domestic product

²⁾ Estimate.

Methodological notes

The calculation of the gross domestic product was implemented for the level of sections and divisions of the Classification of Activities, applying the production approach, at constant prices (base year 2002). It is entirely based on single extrapolation method, combining the output and input indicators.

Gross domestic product valued at market prices is measured from production side as the gross value added by industries, as the total of value added of all economic activities at constant prices minus financial intermediation services indirectly measured (FISIM), plus taxes and less subsidies on products at constant prices.

Reconciliation of quarterly and annual data has been done for the period 1997 – 2009.

Seasonal adjustment is a process of time series decomposition, which removes seasonal effects on time series behavior. Specialized software DEMETRA and procedure TRAMO/SEATS were used.

Data for the first three quarters of the current year may be revised until the data for the fourth quarter are published. The data on the quarterly gross domestic product are published within 90 days after the end of the referent quarter.

Starting from 1999 the Statistical Office of the Republic of Serbia has not at disposal and may not provide available certain data relative to AP Kosovo and Metohia and therefore these data are not included in the coverage for the Republic of Serbia (total).

The methodological backgrounds, concepts and definitions on the basis of which quarterly calculation of the gross domestic product was carried out can be found in the edition of the Statistical Office of the Republic of Serbia: "Quarterly Estimation of the Gross Domestic Product of the Republic of Serbia, 1999 - 2004", No 75, Studies and analyses.

Data series of gross value added by activities and non-seasonally and seasonally adjusted gross domestic product are available on the SORS website, within Statistical Areas, National Accounts, Quarterly National Accounts, Gross Domestic Product, in excel.
