Use of data from this publication is subject to quoting the source.

This publication was produced with support from the United Nations Entity for Gender Equality and the Empowerment of Women (UN Women), in the framework of the project "Advancing Women's Economic and Social Rights in Serbia and Montenegro." The project is implemented with funding from the Government of the Kingdom of Norway.

The views and analysis contained in the publication are those of the authors and do not necessarily represent the views of UN Women, the United Nations or any of its affiliated organizations.

Preface

“Women and Men in the Republic of Serbia” is the third publication presenting statistical data disaggregated by sex. Since 1999, the Statistical Office of the Republic of Serbia does not dispose of certain data for AP Kosovo and Metohija, so they are not contained in the data coverage for the Republic of Serbia (total).

The publication was produced after a review of the beneficiaries’ needs for monitoring the situation in society and relations between the sexes using statistical data, with the intention of rendering statistical data more useful in the design and implementation of policies aimed at eliminating inequalities and advancing equal opportunities.

Sex-disaggregated statistical data collected from the following institutions has been presented: the Statistical Office of the Republic of Serbia (SORS), the Institute of Public Health of Serbia, Ministry of Education and Science, Ministry of Finance, Ministry of Interior, Ministry of Justice, Ministry of Labour and Social Policy, National Employment Service, the Republic Fund for Health Insurance, the Republic Fund for Pension and Disability Insurance and the Republic Institute for Social Protection.

This SORS publication provides a broad range of sex-disaggregated statistical data in the following fields:

- Population
- Health
- Education
- Social Protection
- Judiciary
- Employment
- Earnings and Pensions
- Time Use
- Decision-Making

New additions to this publication in relation to the previous ones are the data obtained from the Survey on the Use of Public Services and Public Integrity and from the first Time Use Survey.

Regular systemic provision of statistical indicators and their improvement are a prerequisite for the analysis of the situation, the adoption of appropriate measures and the monitoring of their implementation. The SORS is committed to building a sustainable institutional framework of gender statistics, to which this publication will also contribute.

We hope that this publication will contribute to advancing gender equality and improving the status of women in the Republic of Serbia and assist the planning and implementation of equal opportunity policies.

Belgrade, December 2011

*Director of the Statistical Office of the Republic of Serbia,
Professor Dragan Vukmirović, PhD*

Introductory remarks

Sex refers to biological characteristics of women and men which are universal, visible and obvious, and usually unchangeable.

Gender refers to a set of roles, obligations and expectations a society assigns and imposes on individuals depending on their sex. They may change over time and they differ from one society to another.

Gender equality refers to women and men having equal opportunities, rights and duties in their social, professional and family environments.

The Republic of Serbia is a signatory of a number of important and binding **international documents, which guarantee the equality of men and women and prohibit gender-based discrimination**, notably the Council of Europe's Social Charter and the European Convention on Human Rights and the United Nations Convention on the Elimination of All Forms of Discrimination against Women (CEDAW).

Domestic guarantees of gender equality are the Constitution of the Republic of Serbia and relevant laws and regulations.

The Constitution of the Republic of Serbia (adopted in 2006) sets the legal basis for the introduction and regulation of the principles of gender equality in Serbia and establishes gender equality as a fundamental constitutional right. Under Article 15 of the Constitution, the state shall guarantee equality between women and men and develop equal opportunities policies. The Constitution also lays down the principle of prohibition of discrimination, including, inter alia, gender-based discrimination.

The Gender Equality Law (adopted in 2009) binds all public authorities to actively pursue equal opportunity policies, monitor the realisation of gender equality principles and supervise the exercise of international standards and constitutionally guaranteed rights within their remits. The Law addresses gender equality in employment, health care, family relations, education, culture, sports, political and public life and judicial protection.

The National Strategy for Improving the Position of Women and Promoting Gender Equality was adopted in February 2009. This document lays down a comprehensive and consistent state policy aimed at eliminating discrimination against women, improving their status and integrating the principle of gender equality in all spheres within the remits of state institutions, as one of the elements of a wider modernisation and democratisation of society. The Strategy focuses on women's participation in policy and decision-making; in the economy, education and health; combating violence against women, and eliminating the presence of gender stereotypes in the media.

The policy of advancing the status of women and gender equality in Serbia aims at achieving the following **priority strategic objectives**:

- ◆ Realisation of women's right to take part in decision-making on an equal footing with men.
- ◆ Eradication of economic inequalities between women and men, elimination of direct and indirect discrimination and more effective use of women's resources in socio-economic development.
- ◆ Achieving gender equality in education and mainstreaming gender into education policy.
- ◆ Improving women's health and mainstreaming gender into health policy.
- ◆ Prevention and elimination of all forms of violence against women and establishing a comprehensive system of protection of women victims of violence.

- ◆ Achieving gender equality in the media, eradication of gender stereotypes and elimination of misogyny/hate speech from the media.

Institutional mechanisms in the Republic of Serbia charged with implementing and monitoring the process of advancing gender equality include the following:

- ◆ **Gender Equality Committee** of the National Assembly of the Republic of Serbia (established in 2002);
- ◆ **Gender Equality Council** of the Republic of Serbia (established in 2004);
- ◆ **Ombudsman** (Deputy Ombudsman in charge of gender equality, rights of children and persons with disabilities; the Law on Ombudsman was passed in 2005 and the Deputy Ombudsman was elected in 2008);
- ◆ **Gender Equality Directorate** within the Ministry of Labour and Social Policy (established in 2007);
- ◆ **Commissioner for the Protection of Equality** (established under the Anti-Discrimination Law in 2010; the Commissioner was appointed in 2010).

There are also provincial gender equality mechanisms in Serbia (the Provincial Secretariat for Labour, Employment and Gender Equality, the Provincial Ombudsman, the Provincial Gender Equality Council, the Gender Equality Committee of the Assembly of the Autonomous Province of Vojvodina, the Provincial Institute for Gender Equality), and local gender equality mechanisms, whose establishment by local self-governments is mandated under the Gender Equality Law.

Gender-sensitive statistics moves beyond simple disaggregation and presentation of existing data by sex, and recognises the need for monitoring the different problems and challenges faced by women and men in all walks of life.

The first international official debate on gender-sensitive statistics took place at the First World Conference on Women in Mexico City in 1975. The 1995 Beijing Declaration and Platform for Action, which provides a clear set of recommendations and guidelines for improving the status of women, also addresses gender-sensitive statistics. It lays down the **obligation of states** to ensure that statistics related to individuals is regularly collected, compiled, analysed and presented by sex and age and that it reflects problems, issues and questions related to women and men in society.

Regular and comprehensive monitoring and presentation of gender-sensitive data allows for identifying gender discrimination in a society i.e. establishing whether there are inequalities between women and men. It also facilitates the design, planning and implementation of policies aimed at eliminating inequalities and improving the status of discriminated groups or individuals.

Highlights

- ◆ 78% of all men and 81% of all women live in a marriage/cohabit. Out of this number, 29% and 30%, respectively, live without children, while 49% and 51%, respectively, live in a marriage/cohabit with their youngest child aged up to 17 (according to the 2002 population census).
- ◆ Women make up 77% of all persons living unmarried with their youngest child under 17 years of age. A total of 7% of women and 2% of men fall into this category (according to the 2002 census).
- ◆ A steady fall in the number of new marriages was recorded between 1980 and 2010. In 2010, there were about one third fewer marriages than in 1980.
- ◆ Total fertility rate dropped from 1.6, as recorded in 2001, to 1.4 in 2010.
- ◆ The number of children born to mothers aged 15–19 years has dropped by more than a third over the past ten years.
- ◆ On average, men and women enter their first marriage two years older than was the case in 2005, women at the age of 27 and men at the age of 30.
- ◆ As much as twice as many men than women die at the age of 30–59, mostly due to circulatory diseases and cancers. Three times more men than women die in transport accidents, and as a result of suicide.
- ◆ Among students who graduated from high school in 2010, the most common occupational profiles for girls are grammar school, economics, law, administration and health and social care, and for boys, mechanical engineering and metal processing, electrical engineering and grammar school.
- ◆ Not only are more women enrolled in colleges and universities (55%), but women make up a higher percentage of graduates – 61% (data from 2009).
- ◆ Among graduates, men account for more than half in the fields of natural sciences, mathematics, computer science (61%) and technical science, manufacturing and construction (56%), while women constitute the majority of all graduates in the fields of education (as much as 91%), health and social care (77%), arts and humanities (65%), and social sciences, business and law (62%). A more or less equal number of male and female students graduate in the fields of services, agriculture and veterinary medicine.
- ◆ In 2009, the number of women and men with doctoral degrees had evened out, and women accounted for 44% of all doctoral and master's degrees and specialists among teaching personnel at universities and colleges.
- ◆ Men use computers and the Internet more than women, even among the younger generation.
- ◆ Although there are fewer young girls without parental care, they are more often placed in foster families than boys.
- ◆ 95% of all adult persons convicted of the crime of domestic violence (in 2010) were men, 5% were women.
- ◆ As much as 95% of all convicted minors are boys (2010 data).
- ◆ In the period from 2007 to 2010, the proportion of women in the total number of victims of serious homicides increased from 28% to 43%.

- ◆ According to the Labour Force Survey, approximately 90% of employees work over 40 hours per week, with no significant differences between women and men.
- ◆ The activity rate for women aged 15 to 64 is 16 percentage points smaller than the activity rate of men (51% and 67%), with earlier retirement for women partly affecting this ratio.
- ◆ The activity rate of women with vocational school or university education is higher than the activity rate of men with the same level of education (75% vs. 65%), and is almost twice the average activity rate for all women aged over 15 years, which is 39%.
- ◆ Living with children under 16 years of age increases the differences between the employment rates of men and women: in the age category of 25 to 49 years, the difference between the employment rates of women and men is only 6 percentage points if they have no children, while among persons with more than one child, the difference increases to about 25 percentage points.
- ◆ There are twice as many self-employed among men than among women (28% of all men aged 15 to 64, and 14% of women are self-employed); thus women account for less than a third of all self-employed (according to the Labour Force Survey).
- ◆ 13% of all women and 24% of women aged 55 to 64 (compared to 4% and 2% of men, respectively) have the status of a contributing, i.e. unpaid, household member who works in a family shop or on a farm.
- ◆ 28% of all farms are registered as women-owned; women, however, make up only 23% of all independent farmers and 71% of unpaid contributing family workers in agriculture.
- ◆ There are somewhat more women in each age category of the unemployed and long-term unemployed persons of working age, and among the registered unemployed. Among unemployed women, the majority have secondary education.
- ◆ Among old-age pension beneficiaries, women account for just over a half, while men make up almost two-thirds of all disability pension beneficiaries. In both categories, women on average receive lower pensions than men: women on average have 18% lower old-age pensions, and 14% lower disability pensions than their male counterparts.
- ◆ According to the first Time Use Survey carried out in Serbia, men on average have more free time than women (just over one hour per day), although on average they spend more time doing paid work than women. On the other hand, women on average spend two hours more doing unpaid work.
- ◆ In the 150 municipalities in Serbia (including municipalities within cities), there are 137 male mayors and only 10 women (in three municipalities there is no elected mayor). In the 23 cities, 22 mayors are men and one is a woman.

1. Population

- ◆ **Population estimates** are based on the results of population counts and on the annual results of the statistics of natural and mechanical changes in population (internal migrations).
- ◆ **Population projections** present the projected number of inhabitants for the referent year. The published data is calculated as a medium low variant. This variant is a combination of hypotheses regarding the medium low fertility rates, changeable mortality rates and changeable migrations in the projection period.
- ◆ **Population by family structure** consists of the population referenced to sex, marriage and kinship characteristics.
- ◆ **Migrant population** includes persons who have changed their place of residence in the referent year.
- ◆ **The mean age of population** represents the median age in the referent year.
- ◆ **Total fertility rate** presents the total number of live-born children per woman aged 15–49.

2. Health

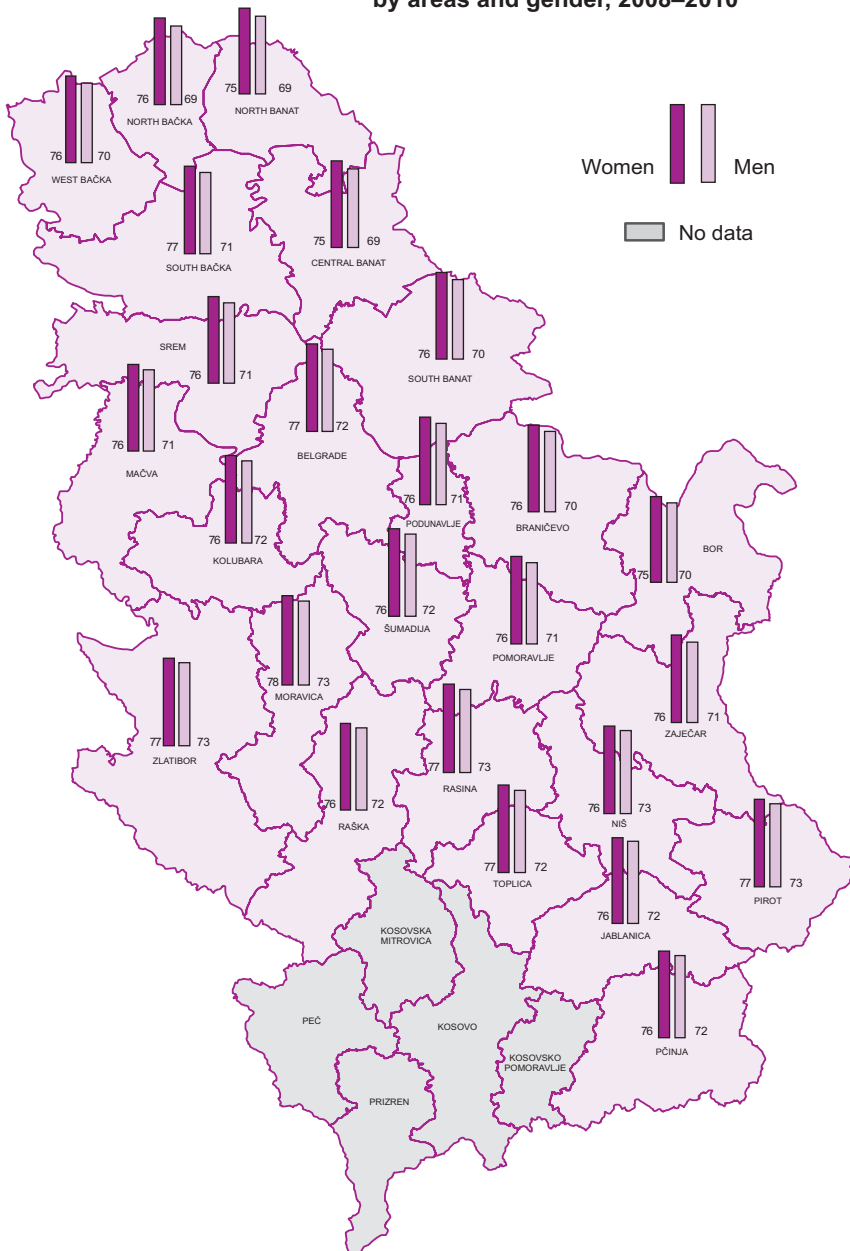

- ◆ **Life expectancy of women/men** is the mean age to which a live-born child (female/male), born in the referent year, is expected to live.
- ◆ **Life expectancy of women and men aged 65** shows the remaining number of years that 65-year-old persons are expected to live in the referent year.
- ◆ **Modern contraception methods** refer to usage of condoms, the pill, intrauterine spirals, local chemical products and diaphragms.
- ◆ **Traditional contraception methods** refer to infertile days and deliberately interrupted sexual intercourse (coitus interruptus).
- ◆ **HIV (human immunodeficiency virus)** is a virus that attacks the immune system cells that are responsible for defense against various states and/or disease.
- ◆ **AIDS (acquired immunodeficiency syndrome)** is a clinical manifestation of infection caused by the virus N1U.
- ◆ **Comprehensive and correct knowledge of HIV** refers to members of the population of a certain age that correctly identify the two most important ways of preventing HIV infection (using condoms and limiting sex to one faithful, uninfected partner), who reject the two most common misconceptions about HIV transmission (by mosquito bites and by sharing food with an HIV-infected person) and who know that a seemingly healthy person may be infected.
- ◆ **The main cause of death** is defined as the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accidents or violence which produced the fatal injury.
- ◆ **Mortality rates by cause of death** presents the total number of deaths, due to a specific cause, per 100,000 inhabitants, in the referent year.
- ◆ **The infant mortality rate** represents the number of infant deaths (one year of age or younger) per 1000 live births in the referent year.

3. Education

- ◆ **Primary education coverage of children aged 7** is the number of children aged 7 enrolled in primary school as a percentage of the total population of children of this age.
- ◆ **Primary education coverage of children aged 7–14** is the number of children aged 7–14 enrolled in primary school as a percentage of the total population of children of this age.
- ◆ **Literacy of pupils aged 15** (in the fields of Reading, Mathematics and Science) denotes the results obtained at the international Program for International Student Assessment (PISA) test. The testing covers full-time 15-year-old pupils (mostly pupils in the first grade of secondary school) and the results serve to assess the knowledge the pupils acquired during their schooling.
- ◆ **Secondary education coverage of children aged 15** is the number of children aged 15 enrolled in secondary school as a percentage of the total population of children of this age.
- ◆ **Secondary education coverage of children aged 15–18** is the number of children aged 15–18 enrolled in secondary school as a percentage of the total population of children of that age.
- ◆ **Primary and secondary education graduates** are pupils who completed the eighth grade of primary school and pupils who completed the third or fourth grade of secondary school (depending on the duration of the educational profile in which they were enrolled).
- ◆ **Primary and secondary school teachers** are all the teachers employed in primary and secondary schools, both full-time and part-time.
- ◆ **Early school leavers** are persons aged 18–24 with at most lower secondary education and not in further education or training as a percentage of the total population aged 18–24.
- ◆ **Students enrolled in tertiary education** are persons enrolled in first-degree academic studies, first-degree vocational studies, second-degree academic studies (Master's), specialist academic studies, specialist vocational studies and doctoral academic studies.
- ◆ **Graduates** are persons who obtain vocational qualifications, a university degree, or an art academy diploma.
- ◆ **Participation of population aged 25–64 in education and training** is the number of persons aged between 25 and 64 who are undergoing any form of education or training as a percentage of the population of that age.

4. Social Protection

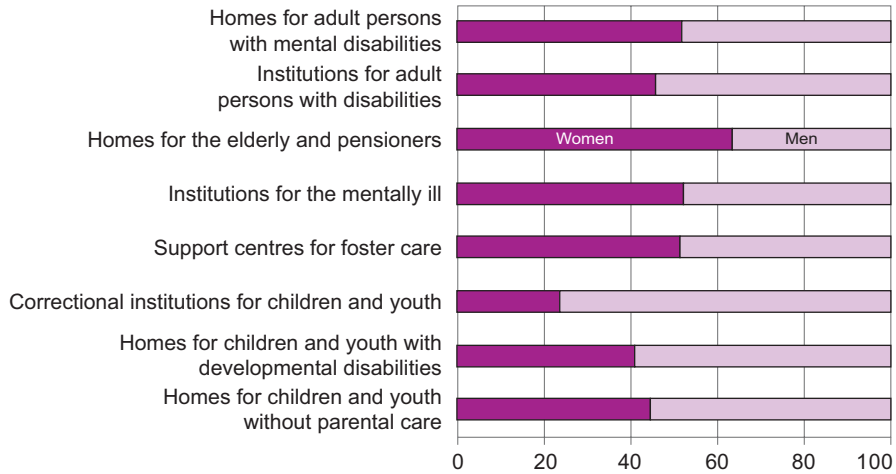

- ◆ **Social protection** consists of organised social activities of public interest carried out with the aim of empowering citizens to lead an independent and productive life in the community, preventing the emergence of social exclusion and eliminating its consequences.
- ◆ **Beneficiaries of social protection institutional accommodation** are persons who cannot be accommodated with their biological or another family, or provided with community services, or for whom such arrangements would not be in their best interest.
- ◆ **Social protection institutions for the accommodation of beneficiaries** include institutions for the accommodation of children without parental care, support centres for foster care, correctional institutions for children and youth, homes for the elderly and pensioners, and institutions for the accommodation of persons with developmental disabilities.
- ◆ **The Child Confidence Index** measures the overall degree of satisfaction of children aged 8–15. The higher the value of the index is, the greater the children's satisfaction with specific aspects of life.

5. Judiciary

- ◆ **Convicted person** is a person found guilty and sentenced for the offence in question by courts of general jurisdiction in the relevant year.
- ◆ **Convicted minor** is a person aged between 14 and 18 years at the time the crime was committed, who perpetrated a criminal offence and was sentenced to juvenile imprisonment or an educational measure.
- ◆ **Convicted adult** is an adult perpetrator pronounced guilty and sentenced. Adult perpetrators of criminal offences are those who, at the moment the criminal offence was committed, were over the age of 18.
- ◆ **Prevalence of bribery** is calculated as the number of citizens (18–64 years of age) who have, during the 12 months prior to the Survey on the Use of Public Services and Public Integrity, given a civil servant money, gifts or have done a counter-favour, against the total number of citizens who have at least once been in contact with a civil servant in the same period.

6. Employment

- ◆ **Active population** (labour force) includes all employed and unemployed persons aged 15 and over.
- ◆ **Inactive population** consists of population aged 15+ who were not categorized under active population.
- ◆ The **formally employed** are persons who entered into employment with an employer (enterprise, institution, cooperative or other organization and entrepreneur) on the basis of a written contract of employment for a definite or indefinite period of time and who have social and legal protection. They include: employees in legal entities, entrepreneurs, persons employed by entrepreneurs and persons who perform their profession independently.
- ◆ The term **employed** in the Labour Force Survey implies persons who, in the week observed, did some work for remuneration (in money or in kind) for at least an hour, and also employed persons who were absent from work in the respective week.
- ◆ The term **employed in legal entities** includes employees in companies, enterprises, institutions, cooperatives and other organizations in the formal sector.
- ◆ The term **unemployed** in the Labour Force Survey means persons who, in the respective week, did no work for remuneration and who did not have a job from which they were absent and to which they could return after the leave. However, this is subject to the following:
 - ◆ In the last four weeks, these persons undertook active steps to find a job and if a job was offered, they would start within two weeks time;
 - ◆ In the last four weeks, these persons undertook no active steps to find a job, since they had already found a job and were about to start working after the respective week and within the following three months at the latest.
- ◆ **Registered unemployed** are persons aged 15 to 65 who are capable of work and ready to work, who are not employed or have otherwise acquired the right to work, and who are registered as unemployed with the National Employment Service and are actively seeking work.
- ◆ **Activity rate** represents the percentage share of the active population in the total population aged 15 and over.
- ◆ **Inactivity rate** is the percentage share of the inactive population in the total population aged 15 and over.
- ◆ **Employment rate** is the percentage share of the employed in the total population aged 15 and over.
- ◆ **Unemployment rate** is the percentage share of the unemployed in the total number of active population.
- ◆ **Long-term unemployment rate** is the percentage of those who have been unemployed for a year or longer in the total active population.
- ◆ **Informal employment rate** is the percentage of persons who perform informal (unreported) work out of the total number of employees. Unreported work includes employed in an unregistered company, employed in a registered company, but without a formal employment contract and without social and pension insurance and unpaid contributing household members.
- ◆ **Full-time equivalent (FTE)** is a unit of measure that expresses the number of persons that would be engaged in scientific research if those persons were employed full-time. It is calculated as the share of actual working hours in the full working-hours quota, and only for those persons who work less than full-time (less than 90% and more than 10%) or are engaged under contractual agreement or authors contract.

7. Earnings and Pensions

- ◆ According to Art. 105 of the Labor Law, an employee's **earnings** include: the remuneration which includes taxes and contributions paid from the earnings by the employee for work performed and time spent at work; raised earnings; earnings compensation and other income (except: personal local public transport financial support and time spent on business trips in the country and abroad, pension indemnity, solidarity assistance, jubilee premium and compensation in case of death and compensation for damages due to occupational injury or occupational disease). SORS calculates average earnings from the total sum of monthly earnings paid out in the reporting month, divided by the number of (formal) employees according to personnel records of legal entities and entrepreneurs who submit data. Employees of the Ministry of Defense and the Ministry of Interior are not included.
- ◆ **Average earnings of employees** in legal entities differ from the overall average earnings in that they do not include the salaries of those employed by entrepreneurs. Average salaries of formal employees can be shown by sex only for employees in legal entities, because their salaries are ascertained through statistical survey. Salaries of the employed by entrepreneurs are obtained on the basis of data from the records of the Tax Administration, which does not provide data disaggregated by sex.
- ◆ **Gender pay gap** is the difference between average gross earnings received by male employees and average gross earnings received by women employees, expressed as a percentage of average gross earnings of men. Differences in average earnings shown in this chapter are not comparable with the differences implied by the EUROSTAT definition of the (unadjusted) gender pay gap because they do not include the earnings of employees employed by entrepreneurs and are not based on hourly earnings. However, as the majority of employees in the Republic of Serbia are employed by legal entities and as part-time work is not a widespread practice, the data presented are still relevant and can serve as an indirect estimate of the gender pay gap across the economy.
- ◆ **Education (qualification) level** required to perform certain jobs and tasks is the level of education determined for a position (by a general act, or job classification act).
- ◆ **Pension** is a monthly cash benefit to which an individual is entitled in respect of insurance for old age, disability, death and physical impairment. There are three categories of pensions: old age, disability and family pension. Beneficiaries can claim the right to an old age pension on the basis of years worked or age, and the right to disability pension is claimed on the basis of disability. In case of the death of the holder, the right to the pension is transferred to a family member. For this kind of pension there is no data on the beneficiaries' sex.

8. Time Use

- ◆ **Average time** is the average time spent on certain activities by all persons.
- ◆ **Proportion of doers** is the number of persons undertaking a specified activity, expressed as the percentage of all persons.
- ◆ **Average time for doers** is the average time that persons undertaking a specified activity spend on the activity.
- ◆ **Activities** are activities (actions) aggregated at the highest level, performed by respondents during the day.
- ◆ **Paid work** consists of time spent at main and second job, lunch breaks during working hours, travel to/from work and other related activities.
- ◆ **Unpaid work** consists of managing food, taking care of textiles, household upkeep and management, gardening and pet care, construction and repairs, shopping and services, child care, other household and family care activities and travel related to household and family care activities.
- ◆ **Personal care** refers to sleeping, eating, washing, dressing and other personal care activities.
- ◆ **Reconciliation of work and family life** is an ad hoc module of the Labour Force Survey that was conducted in April 2010.

**Average time spent on activities, population 15+,
