Labour Force Survey

SERB181 RS10 290612

Labour Force Survey, April 2012 – Preliminary results –

Labour Force Survey represents a study survey that most completely considers the labour force status and fluctuations in the labour market of the Republic of Serbia.

In this survey, we applied the methodological solutions harmonized with the recommendations and definitions of the International Labour Organization (ILO) and the requirements by Eurostat (Statistical Office of the European Communities) and thereby obtained was the most important source for international comparisons of data of the Republic of Serbia with other countries in the area of labour statistics. The frame for the sample selection is based on the Census of population, households and dwellings 2002.

The survey covered about 8000 households on the territory of the central Serbia and the AP Vojvodina. The data were collected relative to the demographic features of the whole population, and for the population aged 15 and above, the data on their working activity were also collected. The total of 21402 persons were interviewed and for 19017 persons the data regarding their working activity were obtained, which equals to 0.3% of the total number of persons aged 15 and above.

The Labour Force Survey was carried out in April 2012 and the period of observation extended from 16 to 22 April 2012

Methodological explanations

The Labour Force Survey observes population aged 15 and above relative to the activity in the referent week, and not according to formal employment status of the persons interviewed.

The term **employed** here anticipates the persons who did a job for at least one hour in the respective week and were duly remunerated (payments in money or in kind), as well as the persons who were employed and were absent from work in the observed week.

Family workers are the persons that rendered assistance, i.e. service to other household members in running family business or agricultural holding, and were not remunerated for their work.

The term **unemployed** refers to the persons who in the respective week did not do any work for remuneration and who did not have a job to be absent from and which they could carry on after the absence, under the conditions as follows:

- In the last four weeks these persons undertook active steps to find job and if a job was offered, they would be able to start working in two weeks time;
- In the last four weeks these persons undertook no active steps to find job, since they had already found a job and were about to start working after the respective week, within the following three-month period at the latest .

Active population (labour force) includes all employed and unemployed persons aged 15 and above.

Inactive population anticipates the persons aged 15 and above that were not categorized as active population.

Activity rate presents the percentage share of active population in total population aged 15 and above.

Employment rate presents the percentage share of employed population in total population aged 15 and above.

Unemployment rate presents the percentage share of unemployed population in total number of active population.

Inactivity rate presents the percentage share of inactive population in total population aged 15 and above.

Long-term unemployment rate anticipates the percentage share of those unemployed for one year and more, in the total number of active population.

Share of long-term unemployment is the percentage share of those unemployed for one year and more in the total number of unemployed population.

For more detailed methodological explanations see the SORS site at <http://webrzs.stat.gov.rs/WebSite/userFiles/file/Zaposlenost%20i%20zarade/SMET/SMET019050C.pdf>.

Since 1999, certain data for the AP Kosovo and Metohija have not been available for the SORS and these data are not included in the coverage for the Republic of Serbia (total).
