

Despite the decreased total number of inhabitants of the Republic of Serbia, Beogradska oblast and Južnobačka oblast noted a slight increase of population. When related to the population estimates for the previous year, the largest relative decrease of the number of inhabitants was noted in Zaječarska and Borska oblast (1.6% and 1.5%), while the largest increase was noted in Beogradska oblast, namely by 0.2%.

**Graph 1. Share of population in total population, by areas, estimate as of mid-2017**

In the Republic of Serbia 50% of the total population lives in six areas only, mostly in Beogradska oblast (1 687 132 or 24%) and in Južnobačka oblast (617 949 or 8.8%), while the smallest number of inhabitants was noted for Toplička oblast (85 287 or 1.2%) and Pirotka oblast (85 964 or 1.2%).

The average age of the total population of the Republic of Serbia is constantly on the increase and in 2017 it equalled 43 years (males – 41.6 and females – 44.4). The process of population ageing is the result of the ever decreasing share of young population (aged 0 – 14) in the total population, which in 2017 equalled 14.4%, while the share of population aged over 65 in the total population equalled 19.6%. The share of working age population (aged 15 – 64) equalled 66% of the total population. The share of female population aged from 15 – 49 (fertile contingent) in the total population equalled 21.9%.

**Table 2. Average age, ageing index and fertile contingent of population of the Republic of Serbia**

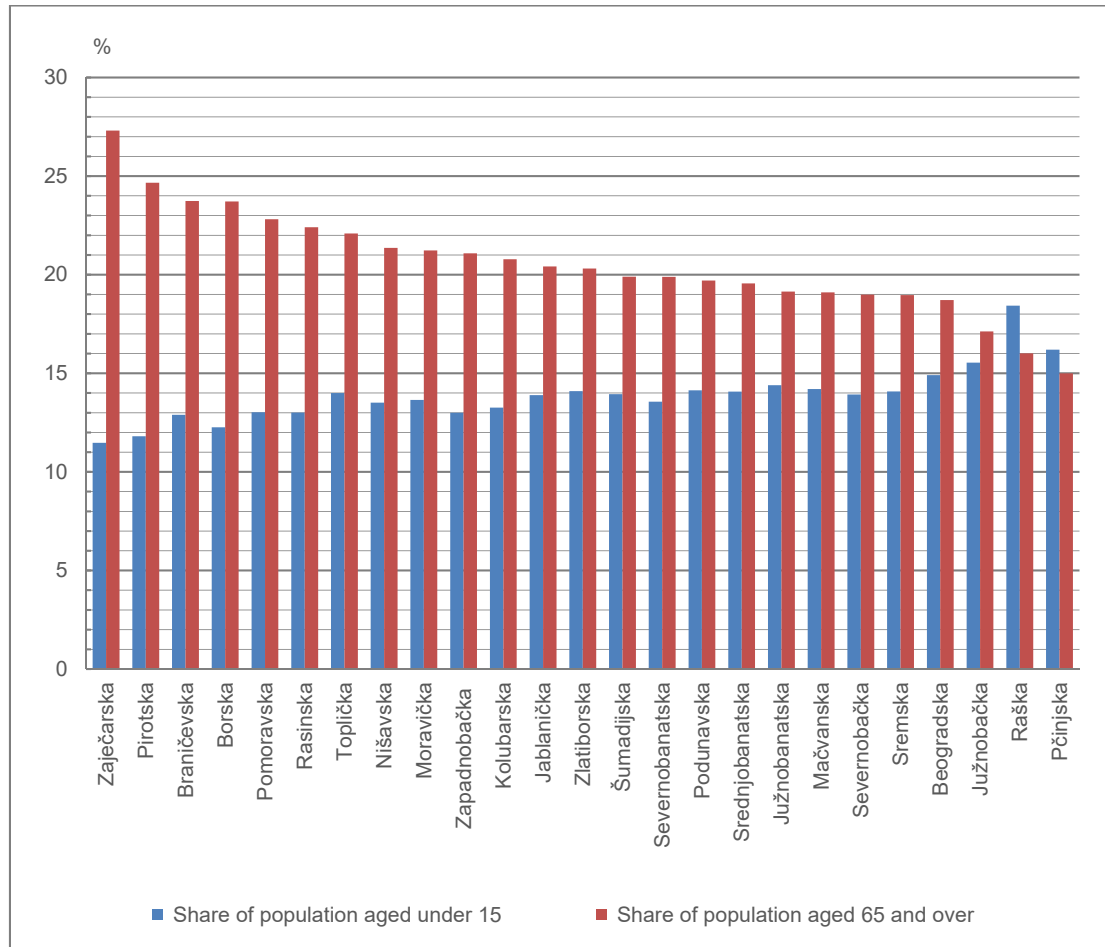

Year	Average age, years			Ageing index <sup>1)</sup>			Fertile contingent, %
	Total	Males	Females	Total	Males	Females	Females

<sup>1)</sup> Ageing index of population presents the ratio between the population aged 60 and over and the population aged 0-19, estimated in the middle of the year of observation.

## Estimated number of population by age and sex

Observed on the level of areas, in Zaječarka oblast the share of population aged 65 and over was the most expressive (27.3%), and at the same time the share of population aged below 15 was the smallest (11.5%). On the other side, the smallest share of population aged 65 and over was noted in Pčinjska oblast (15%); however the largest share of population aged below 15 was not found for Pčinjska oblast, but for Raška oblast (18.4%). The impact of these demographic trends mostly reflects the dependence of elderly population (number of persons aged 65 and over per 100 persons aged 15 – 64), which is the most expressive in Zaječarska oblast (44.6) and in Pirotka oblast (38.8); while the smallest burden for labour force population was noted in Pčinjska oblast (21.8). According to the estimations made for 2017, in the Republic of Serbia the rate of dependence of elderly population equals 29.8.

**Graph 3. Estimated number of inhabitants of the Republic of Serbia by age and sex, mid-2017**

## Estimated number of inhabitants by type of settlement

According to the population estimations by type of settlement, the share of urban population is prevailing in the Republic of Serbia (60.6%). From the demographic viewpoint, the urban population is younger when related to the population of other settlements; the average age of the urban population is lower than the average age of the population in so called other settlements and the difference is 2.5 years. In urban settlements the ageing index noted a lower value (127.6 in relation to 165.2), as well as the rate of dependence of the population aged 65 and over to the working age population (27.1 to 33.9).

**Table 5. Republic of Serbia population estimate by type of settlement, 2017**

Type of settlement	Sex	Number of inhabitants	Average age, years	Ageing index	Dependence rate for population aged 65 and over
Total	Total	7020858	43.0	141.6	29.8
	Male	3419815	41.6	120.9	25.4
	Female	3601043	44.4	163.4	34.1
Urban	Total	4256129	42.0	127.6	27.1
	Male	2027177	40.4	105.2	23.1
	Female	2228952	43.5	151.3	30.9
Other	Total	2764729	44.6	165.2	33.9
	Male	1392638	43.4	147.4	28.9
	Female	1372091	45.8	184.0	39.4

Observed on the lower territorial level, in eight areas only prevailing is the population that is not urban (in Pčinjska, Pomoravska, Jablanička, Sremska, Kolubarska, Braničevska, Rasinska and Mačvanska oblast).

**Graph 4. Population by areas, by type of settlement, 2017**

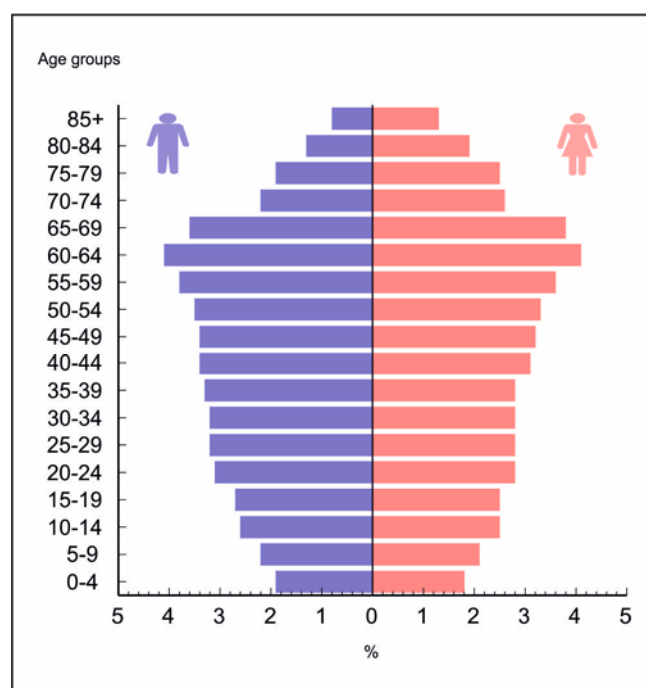

**Graph 5. Age and sex structure of population of the Republic of Serbia by type of settlement (estimated as of mid-2017)**

Urban population

Other population

The various age structures of population by type of settlement were caused by the differences in fertility, however primarily by the differences regarding the direction and scope of migratory movements.

### Methodological explanations

Population estimates are calculated for the census year and post census years and they are based on the results of population census and the results of processing the statistics of natural and mechanical movements of population (internal migrations).

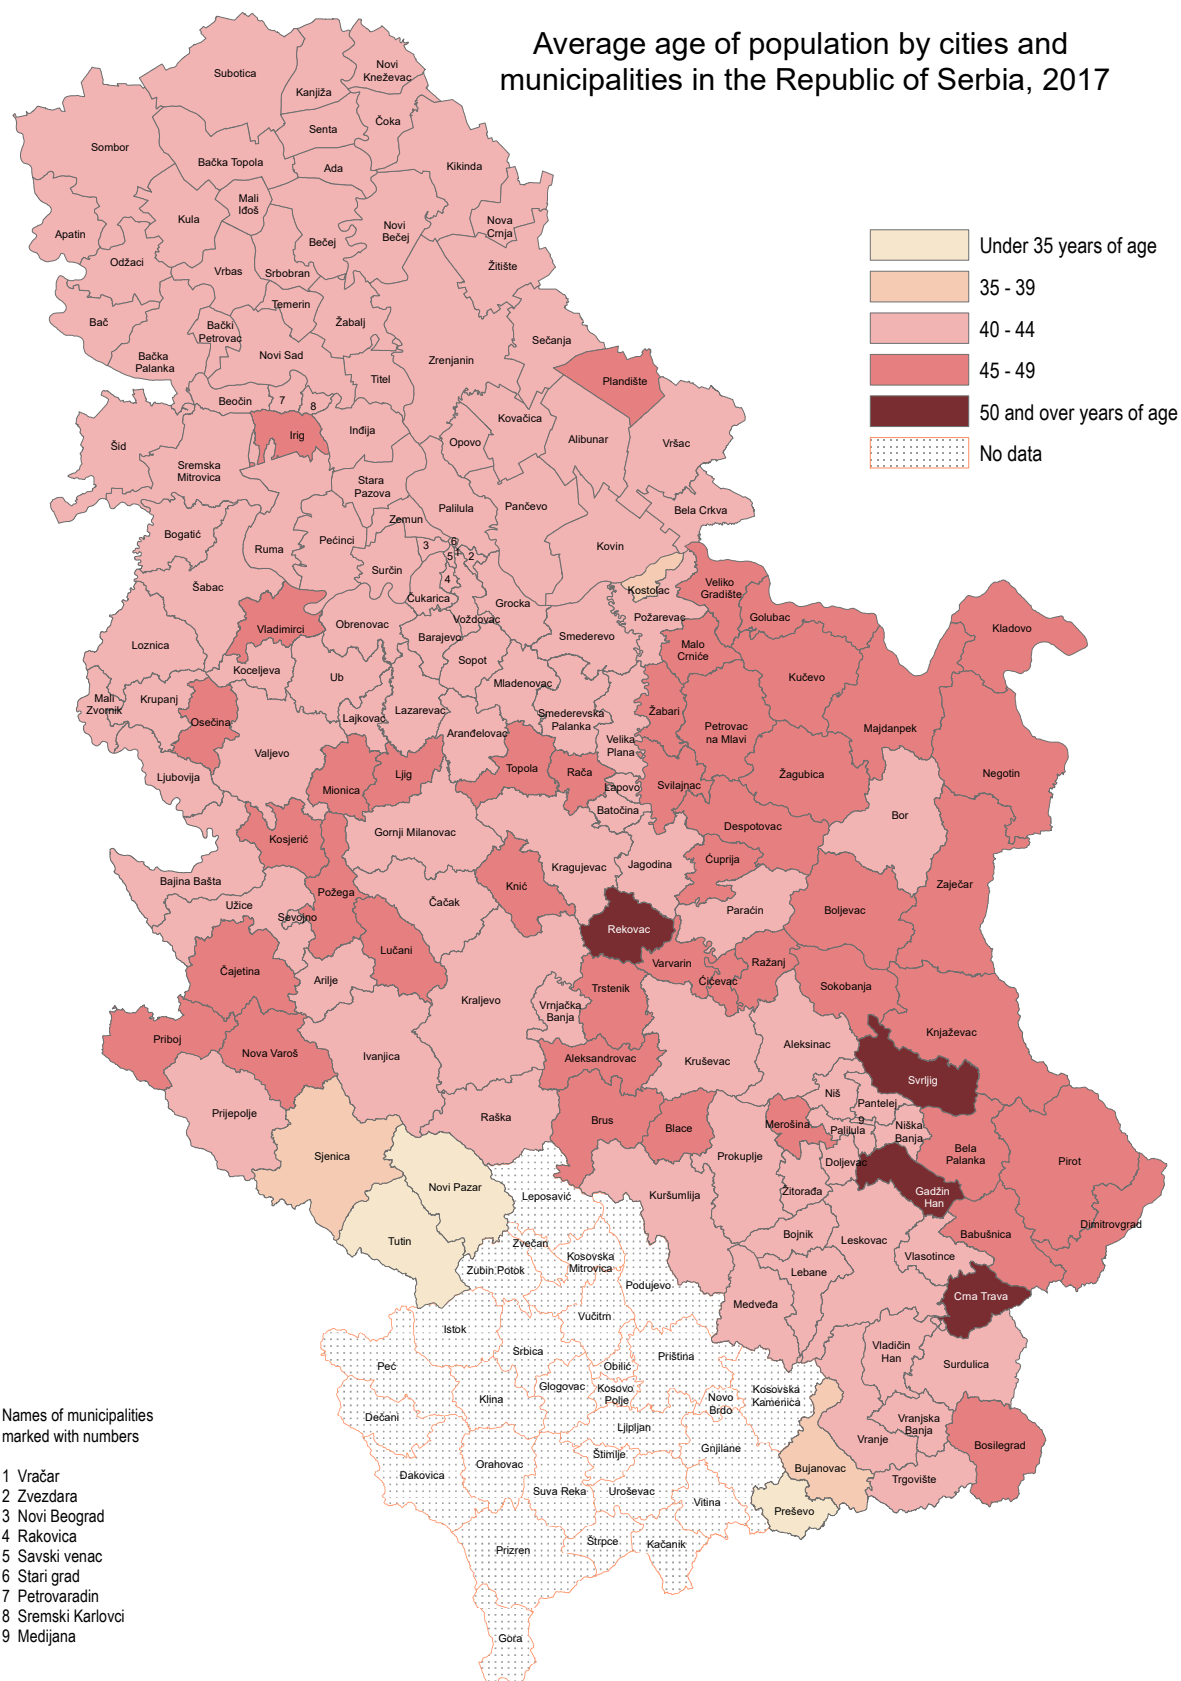

For calculating the estimates by sex, age and type of settlement for the observed year, the following data on the level of settlements were used:

- Results of the census of population as of 30 September 2011, by sex and calendar year of birth; In the municipalities of Preševo and Bujanovac recorded was a reduced coverage of enumeration units due to the boycott by most of the members of the Albanian national community, thus the estimation of the international expert team on the number of usual population at the time of the Census of Population 2011 served as the basis to calculate the estimated number of inhabitants for these municipalities.
- Results of processing statistics of births in the year of observation, i.e. the number of live births by sex and calendar year of birth;
- Results of processing statistics of deaths in the year of observation, i.e. the number of deaths by sex and calendar year of birth;
- Results of processing statistics of internal migrations in the year of observation, i.e. the number of persons that moved in and moved out in this year, by sex and calendar year of birth.

In the first instance the number of inhabitants is reduced to the state as at the beginning of the observed year (1 January), and then calculated is the number of inhabitants at the end of the same year (31 December) on the basis of natural increase and migration balance.

The population estimate in the mid-year presents the estimated average number of inhabitants in this year.

## Average age of population by cities and municipalities in the Republic of Serbia, 2017
