		Number of heads	Meat (carcass weight) tonnes	Number of heads	Meat (carcass weight) tonnes	Number of heads	Meat (carcass weight) tonnes
1.	<b>Horses – total</b>						
2.	Bovine animals under 1 year old						
3.	Of which: calves under 8 months old						
4.	Bovine animals 1 – 2 years old						
5.	Bovine animals over 2 years old						
6.	Of which: bovine animals over 30 months old						
7.	<b>Bovine animals – total (2+4+5)</b>						
8.	Of bovine animals over 1 year old (4+5):	Heifers					
9.		Cows					
10.		Bulls					
11.		Bullocks					
12.	<b>Sheep – total</b>						
13.	Of which:	Lambs under 6 months old					
14.		Young heads, from 6 months to 1 year old					
15.	<b>Goats – total</b>						
16.	Piglets under 25 kg						
17.	Pigs 26-50 kg						
18.	Fattening pigs over 50 kg						
19.	Of which: sows taken out of production						
20.	<b>Pigs – total (16+17+18)</b>						
21.	Broilers						
22.	Pullets and cocks						
23.	Turkeys						
24.	Ducks						
25.	Geese						
26.	Other birds raised						
27.	<b>Poultry – total (21+22+23+24+25+26)</b>						
28.	<b>Game animals</b>						
29.	Forest species						
30.	Farm species						
31.	Hares						

**Explanations:**

The form shall include the data on slaughtered livestock (without forced slaughter) and imported slaughtered livestock.

**Gross weight** of livestock presents animal weight before slaughter.

**Net weight (carcass weight)** means the weight of cleaned and cold carcass, i.e. the whole body of slaughtered animal after bleeding, evisceration and eliminating certain parts, according to species:

- Horses: whole body of slaughtered animal after skinning, presented without organs contained in thoracic/abdominal cavities, head, tail and feet (severed at carpometacarpal or tarsometatarsal joints); kidneys, kidney fat and pelvic fat are included in carcass weight;
- Bovine animals: whole body of slaughtered animal after skinning, presented without organs contained in thoracic/abdominal cavities, head, tail and feet (severed at carpometacarpal or tarsometatarsal joints); kidneys, kidney fat, sexual organs and attached muscles are not included in carcass weight;
- Pigs: body of slaughtered pig, presented without tongue, bristles, hooves, sexual organs, flare fat, kidneys and diaphragm
- Sheep and goats: whole body of slaughtered animal presented without organs contained in thoracic/abdominal cavities, head, and feet (severed at carpometacarpal or tarsometatarsal joints), without tail, sexual organs and attached muscles; kidneys and kidney fat are included in carcass weight
- Poultry: animal slaughtered, plucked and drawn. For poultry, in edible parts included are heart, liver, gizzard, neck, feet and head.

**Raw fats** mean lard, bacon and fats directly separated from meat. Total weight of raw fats is presented, in tonne.

**Fattening pigs** mean both male and female pigs raised for slaughter and weighting over 50 kg; sows and boars taken out of production are included.
