PREFACE

Women and Men in the Republic of Serbia is the sixth publication presenting statistical data disaggregated by sex. The first one was published in 2005 and a regular three-year publication period was established.

The publication was produced after a review of the users' needs for monitoring the situation in society and relations between the sexes using statistical data, with the intention of rendering statistical data more useful in the design and implementation of policies aimed at eliminating inequalities and advancing equal opportunities for all.

In addition to data collected and processed by the Statistical Office of the Republic of Serbia, sex-disaggregated statistical data were taken from other producers of official statistics, as well as data from administrative sources.

This SORS publication provides a broad range of data in the following fields:

- ▶ Population
- ▶ Health
- ▶ Social Protection
- ▶ Education and Science
- ▶ Employment
- ▶ Earnings and Pensions
- ▶ Living Standard
- ▶ Time Use
- ▶ Judiciary
- ▶ Decision-Making
- ▶ International Indices

Regular systemic provision of statistical indicators and their improvement are a prerequisite for the analysis of the situation, the adoption of appropriate measures and the monitoring of their implementation. Official statistics is committed to building a sustainable institutional framework of gender statistics, to which this publication will also contribute; here for the first time presented are the indicators intended to monitor the Sustainable Development Goals (SDGs).

Since 1999, the Statistical Office of the Republic of Serbia does not dispose of certain data for AP Kosovo and Metohija, so they are not contained in the data coverage for the Republic of Serbia (total). For the sake of comparability, the census data before 1999 do not include the data for AP Kosovo and Metohija.

Belgrade, December 2020

Director
Dr Miladin Kovačević

INTRODUCTORY REMARKS

Sex refers to biological characteristics of women and men which are universal, visible and usually permanent.

Gender refers to a set of roles, obligations and expectations a society assigns and imposes on individuals depending on their sex. They may change over time and they differ from one society to another.

Gender equality refers to women and men having equal opportunities, rights and duties in their social, professional and family environments. Gender equality is a prerequisite of any sustainable development with the aim that people may live in a happy and modern society where women and men have equal access to resources and may dispose on equal basis of the achieved results, i.e. where distribution of power is equalized.

The Republic of Serbia is a signatory of several important and binding **international documents, which guarantee the equality of women and men and prohibit gender-based discrimination**. Among these documents, the most important are documents of the United Nations (Universal Declaration of Human Rights, the Convention on the Elimination of All Forms of Discrimination against Women — CEDAW), the Council of Europe (European Conventions for the Protection of Human Rights and Fundamental Freedoms, the European Social Charter and the Council of Europe Convention on preventing and combating violence against women and domestic violence) and the European Union (EU Charter of Fundamental Rights).

Domestic guarantees of gender equality are the Constitution of the Republic of Serbia and the relevant laws and regulations.

The Constitution of the Republic of Serbia (adopted in 2006) sets the legal basis for the introduction and regulation of the principles of gender equality in Serbia and establishes gender equality as a fundamental constitutional right. Under Article 15 of the Constitution, the state shall guarantee equality between women and men and develop equal opportunities policies. The Constitution also lays down the principle of prohibition of discrimination, including, inter alia, gender-based discrimination.

The Gender Equality Law (adopted in 2009) binds all public authorities to actively pursue equal opportunity policies, monitor the realization of gender equality principles and supervise the exercise of international standards and constitutionally guaranteed rights within their remits. The Law addresses gender equality in employment, health care, family relations, education, culture, sports, political and public life and judicial protection.

The Anti-Discrimination Law that generally makes any discrimination illegal, stipulates discrimination forms and cases, as well the procedures for the protection against discrimination, came into force on 1 January 2010.

The Domestic Violence Law came into force on 1 June 2017 and it regulates the protection against domestic violence and the conduct of public authorities and institutions in precluding domestic violence and in protecting and rendering support to the victims of domestic violence.

The National Gender Equality Strategy for the period over 2016–2020 was adopted on 14 January 2016. The Strategy is the fundamental strategic document in the Republic of Serbia that is passed with the aim to upgrade gender equality and it envisages more participation for women in political life and decision-making processes, improved economic status of women and female entrepreneurship, elimination of gender-based violence and improved status for multiple-discriminated and sensitive women groups, such as are older women, women in non-urban areas, single mothers, women with disability, women with HIV, Roma women, etc.

The Strategy concerns the elimination of negative gender related stereotypes and discriminatory practice towards women, and of the practices that give rise and produce unequal relationships between women and men, the distribution of parental rights and obligations and economic custody on women and men, the upgraded economic status of women, the enhanced participation of women in political and public life, especially in executive power bodies, changed status and role for women in the domain of security, improved health status of women and upgraded status of women in non-urban areas, as well as the introduction of gender related perspectives in public policies.

The priority strategic goals of the policy of upgrading the status of women and gender equality in the Republic of Serbia over the period 2016–2020 are the following:

- ▶ Changed gender related patterns and upgraded culture of gender equality;
- ▶ Enhanced equality of women and men by applying the policies and measures of equal opportunities (especially as regards the marginalized groups and health of women);
- ▶ Systemic introduction of gender related perspectives in making, implementing and monitoring public policies (including gender sensitive statistics and records).

Institutional mechanisms are primarily charged with providing key support and implementing the policies of advancing gender equality; the Republic of Serbia they include the gender equality mechanisms on the national level, the level of autonomous provinces, and on the local level.

The institutional mechanisms that in the Republic of Serbia implement and monitor the process of gender equality on the national level are the Coordination body for gender equality (established in 2014), which coordinates the activities of the public administration bodies in implementing the policy of gender equality and takes into consideration all issues of importance for its implementation, Ministry for human and minority rights and social dialogue (established on 26 October 2020 following the Law on ministries) has taken over the exercise of competencies in the field of anti-discrimination policy and gender equality from the Ministry of Labour, Employment, Veterans and Social

Affairs, and the Committee for human and majority rights and gender equality of the National Assembly (starting from 2003), which, inter alia, considers all draft laws and other legal acts from the gender-related viewpoint.

The promotion of gender equality is also in charge of independent bodies for the protection of human rights on the national level: Ombudsman, whose one of three deputies in charge of rights of children and gender equality, and the Commissioner for the protection of equality.

There are also provincial gender equality mechanisms in Serbia (Gender equality committee of the Assembly of AP Vojvodina, AP Vojvodina Secretariat for social policy, demography and gender equality, AP Vojvodina Office for gender equality, AP Vojvodina Ombudsman in charge of gender equality), as well as the local mechanism that are envisaged by the Gender equality law adopted in 2009, and therefore obligatory for the local self-government bodies.

Gender-sensitive statistics move beyond simple disaggregation and presentation of existing data by sex; however, also recognise the need for monitoring the different problems and challenges faced by women and men in all walks of life.

The first international official debate on gender-sensitive statistics took place at the First World Conference on Women in Mexico City in 1975. **The 1995 Beijing Declaration and Platform for Action**, which provides a clear set of recommendations and guidelines for improving the status of women on the global level, also lays down the obligation of states to ensure that statistics classified by sex and age are regularly collected, compiled, analysed and published so to provide an insight into the issues related to the status of women and men.

In September 2015, all United Nations member states adopted the 2030 Agenda, which represents a vision of sustainable development and a better, more stable and safer life for all. The agenda contains short-term and long-term goals and targets in the economic, social and environmental dimensions. Statistics and data are becoming increasingly important and necessary so that indicators of sustainable development goals (SDGs) should be disaggregated, where relevant, by gender, age, income, migratory status, disability, etc., in accordance with the UN Fundamental Principles of Official Statistics.

The year 2020 is significant as marking 25 years from the adoption of the Beijing Declaration and Platform for Action, and therefore we prepared the National overview of the achieved progress in implementing the Beijing Declaration and Platform for Action +25. This report states that gender statistics have been upgraded and more versatile gender sensitive data have become available, which add to the better understanding of the needs and influence that policies have on various groups of women and men.

Regular and comprehensive monitoring and presentation of gender-sensitive data allows for identifying gender discrimination in a society i.e. establishing whether there

are inequalities between women and men. It also facilitates the design, planning and implementation of policies aimed at eliminating inequalities and improving the status of discriminated groups or individuals.

Gender-sensitive statistics is an indispensable data source for the creation of Gender Equality Index, which is regarded as an overall indicator of the progress in the national implementation of gender equality principles. The Republic of Serbia is the first among the non-EU countries that introduced and estimated Gender equality index in 2015. Gender equality index as a tool for measuring progress in the domain of gender equality, which was developed by the European Institute for Gender Equality (EIGE), covers six main domains: labour, money, knowledge, time, power and health, as well as two satellite domains: gender-based violence and intersecting inequalities. The index indicates the areas where progress is required, and thereby ensured is the support for policymakers in conceiving more effective measures for upgrading gender equality.

In Serbia Gender equality index was calculated also in 2018, when it equaled 55.8 points (the EU average: 66.2 points), which indicated a progress when compared to the year 2015, when it equaled 52.4 points.

Gender inequalities fall within the fundamental social inequalities, which have been clearly expressed during the COVID-19 pandemic. Various analyses conducted in Serbia showed that the burden measured by the extent of exposure to the risks of coronavirus infections at work, as well as by the degree of engagement in everyday strategies of household and family care, was far beyond proportional for women compared to men.

The editorial board wishes to thank all those who have contributed to the preparation and development of this publication.

1

POPULATION

HIGHLIGHTS

- ▶ The data of 2011 Census of Population, Households and Dwellings indicate decrease in the number of population of the Republic of Serbia after the Census of 1991.
- ▶ The data on the population density by districts show that the district of Beograd is the most populated, and the district of Zaječar is the least populated.
- ▶ Based on the data on the population estimates for the year 2019, the average age of women is 44.7 years, and the average age of men is 41.9 years. Regarding the data of the Census of 1921, the average age of women increased by almost 16 years, and of men by 14 years.
- ▶ According to the data presented for the years 2015, 2017 and 2019, the aging index of the population of Serbia is constantly on the increase, which shows that the population is in a deep aging process. In addition, the increase of all three dependency indicators stress the demographic, as well as the numerous economic and, generally, social consequences of the process of population aging.
- ▶ The 2011 Census data indicate also notable differences between women and men regarding the categories of population that is economically active and the categories of economically inactive population. So, men account for 58% of the total number of persons that are economically active, while women account for 57% of economically inactive population.
- ▶ The data of the censuses of 2002 and 2011 indicate small changes in the household structure according to the number of members and sex of the head of household. As regards people living in one-person households, the proportion of women is considerably higher, while men are prevalent as heads of households in all multi-person households.
- ▶ As regards people living in one-person households, the proportion of women is higher and most expressive for those aged 65+. According to the 2011 Census data, women make up three quarters among people aged 65 and over and living in one-person households. Among "single" persons aged 30 to 49, the proportion of men equals 63%.
- ▶ Regarding families by type and heads of households by sex, the proportion of men is largest in the category "father with children" (91.9%), while the proportion of women is largest in the category "mother with children" (77.3%).
- ▶ The census results concerning the issue of families by number of children and sex of head of household indicate that women, as heads of household, are most represented in the category "family with one child" with 29.3%.
- ▶ Among all categories of marital status, the proportion of women is largest in the category widow/widower (78.5%), and the proportion of men is largest in the category unmarried (57.5%). The differences in the structure by sex are the least

expressive in the category married, living together (50.1% to 49.9%), while the difference is somewhat more notable in the category married, not living together (52.2% for women, and 47.8% for men).

- ▶ Among the population living in consensual unions, the most numerous is the category of women aged 25 to 29. The proportion of women is considerably higher in the first three age groups, while men are more numerous in all other age groups.
- ▶ In the period 1989–2019 noted was a constant decline in contracting marriage. Therefore, in 2019 there were by almost one third less contracted marriages than in 1989; however, the number of dissolved marriages, with smaller fluctuations, remained nearly unchanged.
- ▶ Regarding the difference in age of persons contracting marriage, the proportion of young grooms increased from 16% to 20% in the ten-year period, and also noted was the decreased proportion of grooms above the age of 9.
- ▶ In the period 2009–2019 the number of liveborn baby girls decreased by 7.4%, while the number of liveborn baby boys was down by 9.3%.
- ▶ In the period 2009–2019, the average age of both mothers and fathers increased by two years.
- ▶ In 2011 and in 2019, the largest proportion of children born within wedlock (64.8%) gave women aged 25–34. In 2011 the largest proportion of children born out of wedlock (43.3%) gave women aged 25–34 and women aged 15–24 (43.1%), while in 2019 the same ratio equalled 47.1% and 32.7%.
- ▶ Among the migrant population, women are spatially more mobile than men in most age groups, especially in the group 15 to 34 years of age.

DEFINITIONS

- ▶ **Data on the number of population** that are presented in this publication were collected in the censuses conducted from 1921 to 2011. There is no complete comparability of “permanent”, i.e. total population in the censuses.
- ▶ **Population estimates** are based on the results of population census counts and on the statistics of natural and mechanical changes in population (internal migrations).
- ▶ **Population projections**, as a wide concept, assume the modelling of demographic future based on the presumptions that in the time when they are defined may seem probable, but not necessarily. They are produced on the basis of the estimated number of inhabitants by age and sex for the referent year, and established hypotheses on future trends of components of population changes, i.e. fertility rate, death rate and migration. The Serbian population projections for

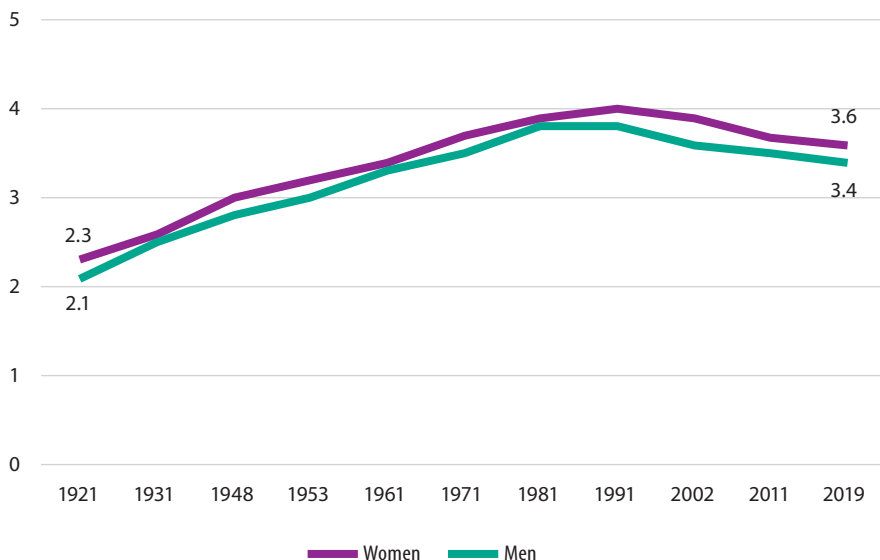

the period 2011–2041 are produced in five variances: low, medium, high, then the variance of constant fertility and mortality, and the variance of zero migration balance. In this publication presented are the results of low variance, which assumes low rate of total fertility and expected mortality rate and population migration.

- ▶ **Average age of population** represents the average of completed age of the population members (arithmetic mean value).
- ▶ **Population aging index by sex** indicates the demographic process of population aging and shows the ratio of the number of persons aged 60 and over by sex, to the respective number of persons aged 0–19 years. Aging index not exceeding 20 index points stands for an extremely young population, while the aging index value over 40 index points indicates old population, i.e. population entered into aging process.
- ▶ **Vital index** is defined as the ratio of the number of livebirths to the number of deaths in the referent year.
- ▶ **Total dependency coefficient** represents the proportion of the population aged 0–14 and the population aged 65 and over in the working-age population (aged 15–64).
- ▶ **Young population dependency coefficient** is the ratio of the total number of young population (aged 0–14) to the number of working-age persons (aged 15–64).
- ▶ **Elderly population dependency coefficient** is the ratio of the total number of elderly people in the years when they are mainly economically inactive (aged 65 and over) to the number of working-age persons (aged 15–64).
- ▶ **Population by age and sex** is represented through an age-gender pyramid showing population structures by sex and age groups.
- ▶ **Population by economic activity** — the 2011 Census data concerning economic activity are compiled for the persons aged 15+ and applied is the concept of so-called current activity, e.g. “labour force”. The total population is classified as economically active (consisting of persons performing activity and unemployed persons) and as economically inactive population.
- ▶ **Household** is taken to be every family or other people community, whose members live together and share their living expenses (habitation, food, etc.). Household can be one-person or multi-person, whether persons are related or unrelated.
- ▶ **Family** is a union consisting of a married or consensual couple, parents (both or one) and their children. Thereby, child is any person, regardless of the age and marital status, who lives in a household with one or with both parents and does not have a marital/consensual partner or his/her own child in that household.

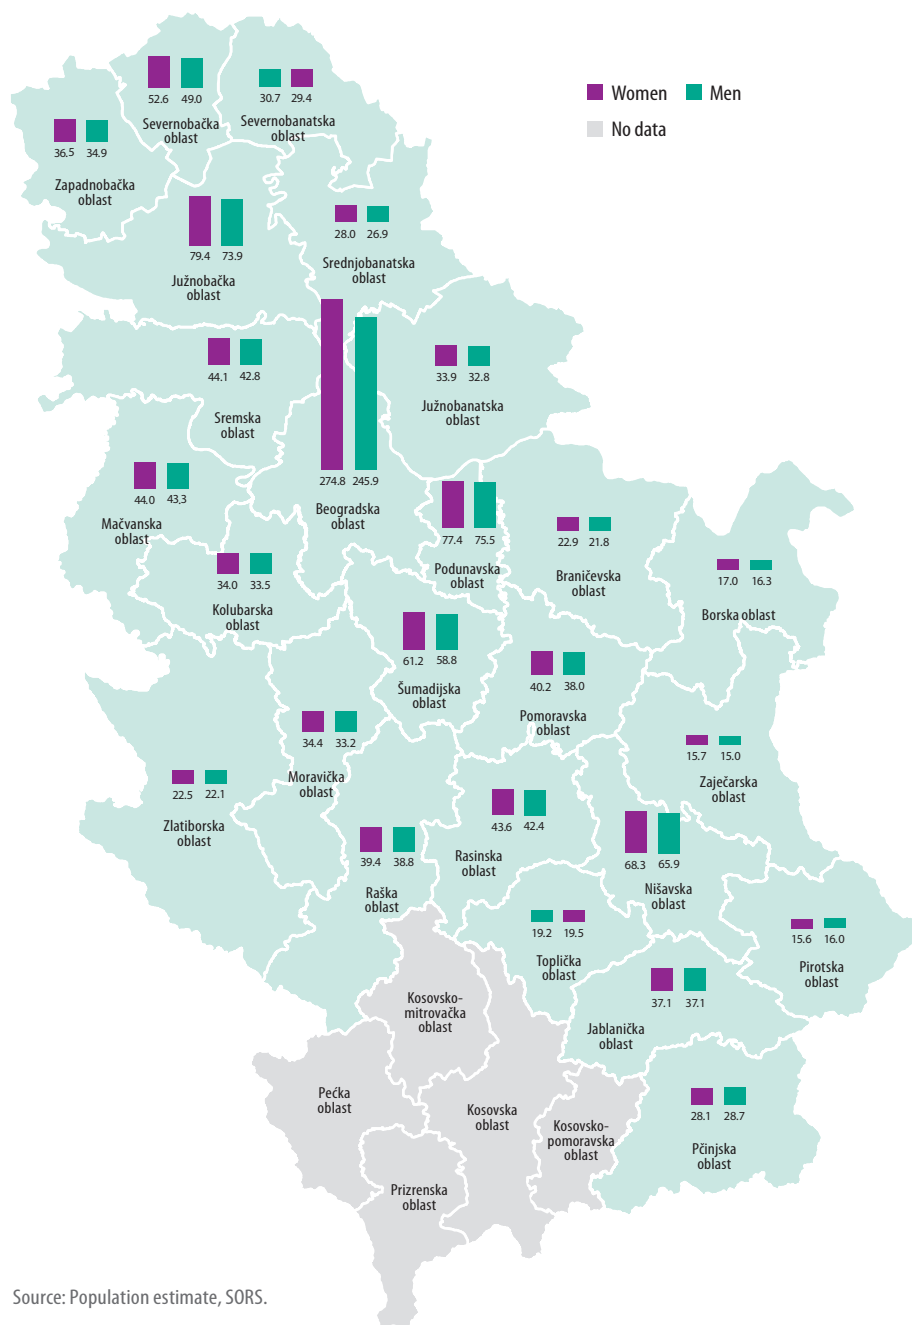

- **Marital status** can be observed from the perspective of legal marital status (de jure) and from the perspective of de facto marital status which also includes persons who live in consensual union.
- **Migrant population** include persons who have changed the place of permanent residence within the territory of the Republic of Serbia in the referent year.
- **Immigrated population** is the population that do not live in the place of residence from their birth.

HEALTH

HIGHLIGHTS

- ▶ In the period from 1993 to 2019, the live birth rate in the Republic of Serbia constantly decreased on slightly varied scale, and the death rate was on the steady increase. In the period 1993–2019, the natural increase rate expressed negative value for both female and male population.
- ▶ The life expectancy, according to the vital statistics data for 2019 is 78 years for women, and 73 years for men.
- ▶ Total fertility rate slightly rose from 1.4 to 1.5 in the period from 2009 to 2019.
- ▶ According to the data for 2019, 10.2% of women and men did not visit a doctor in the past year, while 11.1% of women and 12.6% of men did not visit a dentist, although they had health problems. The main reasons stated for not visiting a doctor were: they could not afford to visit a doctor (28.0% of women and 23.7% of men), they expected their health condition to get stabilized (20.9% of women and 23.3% of men), and they could not take time because of work, care for children or for others (14.8% of women and 17.7% of men). The main reasons for not visiting a dentist were financial reasons (54.2% of women and 48.2% of men), and the fear of doctor (dentist) hospitalization/examination/medical treatment (11.1% of women and 14.2% of men).
- ▶ At the age up to five years, there has been a delay in growth at 3.1% of girls and 7.4% of boys in 2019.
- ▶ According to data for 2019, 1.9% of girls and 3.2% of boys under the age of five have a lag in weight in relation to height, while 8.9% of girls and 12.7% of boys of the same age are obese.
- ▶ According to the data for 2019, even twice more men than women die in the age from 30 to 59, mostly from the bloodstream system diseases and tumours.
- ▶ 3.6 times more men than women die due to traffic accidents.
- ▶ According to the data for 2019, men committed suicide on three times higher rate than women.

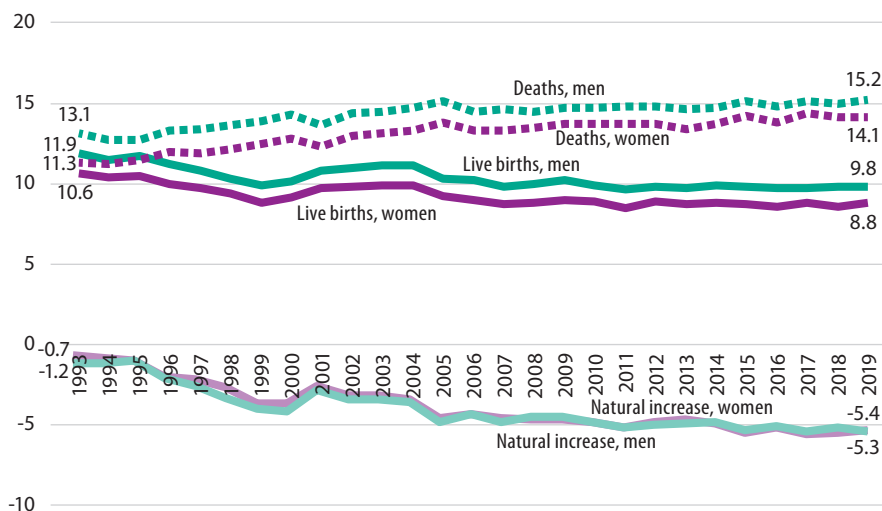

DEFINITIONS

- ▶ **Life expectancy of women/men** is the mean age to which a live-born child (female/male) born in the referent year is expected to live.
- ▶ Indicator **Healthy life years (HLY) at birth** measures the number of years that a person at birth is still expected to live in a healthy condition. HLY is a health expectancy indicator which combines information on mortality and morbidity.

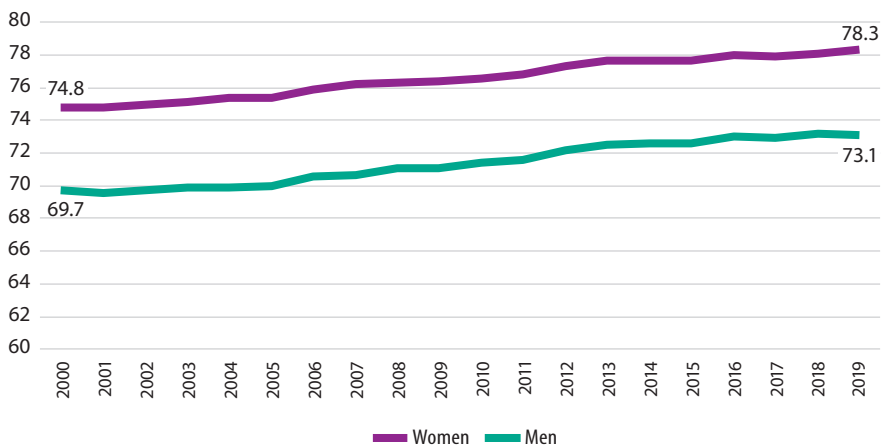

- ▶ **Total fertility rate** presents the total number of live-born children per woman aged 15–49.
- ▶ **Natural increase rate** represents the difference between the birth rate and the mortality rate, in the referent year.
- ▶ **Stunting** refers to a child who is too short for his or her age.
- ▶ **Wasting** refers to a child who is too thin for his or her height.
- ▶ **Overweight** refers to a child who is too heavy for his or her height.
- ▶ **Underlying cause of death** is defined as the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury.
- ▶ **Mortality rate by cause of death** presents the total number of deaths due to a specific cause, per 100,000 inhabitants, in the referent year.
- ▶ **Infant mortality rate** represents the number of infant deaths (one year of age or younger) per 1,000 live births in the referent year.

SOCIAL PROTECTION

HIGHLIGHTS

- ▶ Of the total number of children beneficiaries with active records of the centres for social work, the children of both sexes from the age group 6–14 make the largest part. Girls of this age make 48.4% of the total number of girls. The share of boys of this age is rather similar and they make 47.9% of the total number of boys.
- ▶ Among persons with disabilities on the records of the centres for social work, the highest proportion of both sexes is in the age group 26–64. The share of women of the subject age equals 42.6% of the total number of women, while the share of men equals 48.8%.
- ▶ Among the beneficiaries of social protection institutions, the percentage share of men is higher in all types of institutions, except among elderly residential care beneficiaries (over 65 years of age). In this category, which also features the largest figures (about 20 000 beneficiaries), the share of women is considerably higher than the share of men, and it equals 65%.
- ▶ In shelters, in 2019 there were 440 women and 417 men (adult beneficiaries of accommodation services in shelters that are on the records of centres for social work). The category Adult (aged 27–64) expressed the largest numbers, and shares by sex were almost equal (49% women, 51% men). In the other two categories, the share of females was somewhat higher; 56% for Young, i.e. 53% for Elderly.

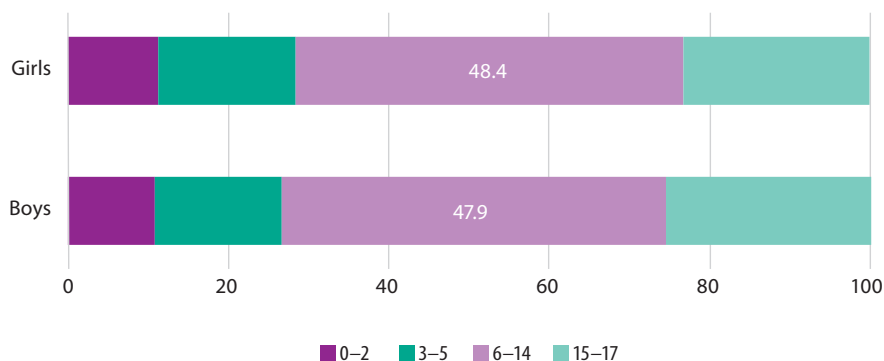

DEFINITIONS

- ▶ **Social protection** is an organized social activity of public interest carried out with the aim of providing support and empowering citizens to lead an independent and productive life in the community, as well as preventing the emergence of social exclusion and eliminating its consequences. The objectives of social protection are implemented by rendering the services of social protection and through activities that help avoiding, lessen or eliminate the dependence on social services.
- ▶ **Beneficiary of rights or services of social protection** is an individual or family who face(s) obstacles in meeting the needs, due to which such individual or family is unable to reach or maintain the quality of life or does not have enough resources to meet the basic needs, and cannot achieve them by the work, from property income or from other sources.
- ▶ **Children (minor person) and young (adult person under the age of 26)** are the beneficiaries of rights and services of the social welfare system when, due to family and other life circumstances, their health, safety and development are at risk, i.e. if it is certain that without the support of the social protection system they cannot reach an optimum level of development.

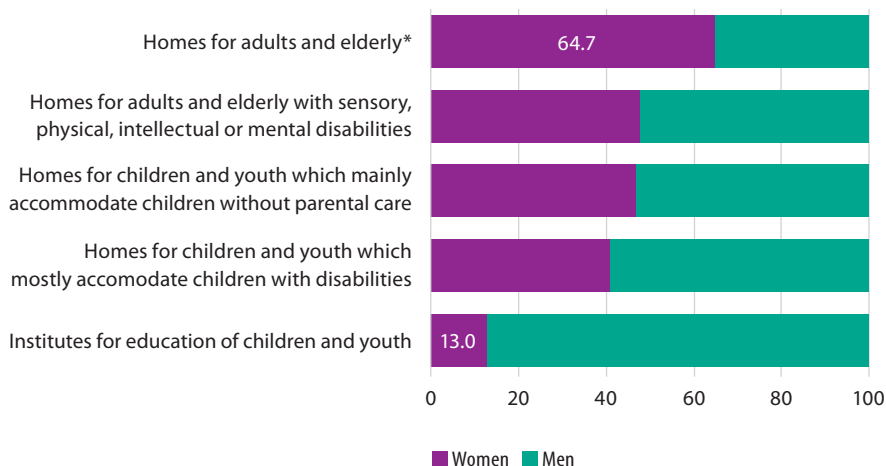

- ▶ **Adult person from the completed 26 to the completed 65 years of age and an adult person over the age of 65** could be beneficiary of rights and services of the system of social protection when their wellbeing, safety and productive life in the society are at risk due to old age, disability, illness, family and other living circumstances.
- ▶ **Social protection institutions providing residential care** are established as institutions for children and young persons, or as institutions for adult and elderly beneficiaries.
- ▶ **Beneficiaries of residential care in social protection institutions** are persons who cannot be accommodated with their biological or another family, or provided with community services, or for whom such arrangements would not be in their best interest. Residential care is envisaged to ensure housing and meeting the basic living needs, health care, as well as the access to education for children.
- ▶ **Residential care in shelters** is envisaged to provide short term accommodation for beneficiaries and to ensure safety, finding sustainable solutions for critical situations, meeting their basic needs and the access to other services.

³ Data on the accommodation of adult users of the shelter are collected through the Report on the work of the Centers for Social Work (CSW). One of the methodological changes is that data provided by shelters are collected at the level of the reporting year in total (not as of 31 December).

4

EDUCATION AND SCIENCE

HIGHLIGHTS

- ▶ Inclusive education in primary schools covers significantly more boys than girls (according to the individual education plan, the proportion of girls to boys is roughly one to two).
- ▶ The proportion of boys to girls graduating from three-year secondary vocational schools is three to one. Girls are more numerous in the fields of education: Textile and leatherwork, Personal services and Health and social work.
- ▶ Among the students who complete general secondary four-year education (high school), there are more girls (58%) than boys (42%). Also, girls make majority among students who complete secondary vocational four-year schools (53% girls to 47% boys). Boys are more numerous in the fields of education: Electrical engineering, Mechanical engineering and metalworking, Geodetics and construction, Transport, Forestry and woodworking, and Geology and mining.
- ▶ More women enroll and complete tertiary education (higher schools and university). Among the enrolled students, women make 57%, and among graduates they make 59% (data for 2019).
- ▶ Among the graduate students in 2019, women accounted for more than a half of all graduates in a large number of fields of education, while men are dominant in the fields of: Information and communications technology/ICT (66%) and Engineering, manufacturing and construction (61%).
- ▶ In 2019, more women (57%) than men (43%) became holders of PhD degrees. Women make majority in many academic fields such as Health (71%), Arts (68%), and Science (66%), while men are more represented in: Engineering, manufacturing and construction (57%), Information and communications technology/ICT (66%) and Services (56%).
- ▶ Men are dominant among the members of the Serbian Academy of Science and Art (SANU). In 2020, over 90% of all members are men. The largest participation of women is in the Department of Language and Literature and the Department of Historical Sciences.
- ▶ Among employed in the field of R&D, in 2018 women are dominant with a 51% share. Almost the same proportion is among scientific researchers, i.e. women make 51.4%.
- ▶ The largest participation of women researchers is in medical sciences, 58.6%, and the smallest participation is in engineering and technology (40%).
- ▶ In the most of age groups, women are more computer-literate than men. In older age groups, there are more men among computer users. The majority of internet users are also women.

DEFINITIONS

- ▶ **Drop-out rate in regular primary and secondary schools** is the divergence in the number of pupils at the beginning of the school year and the number of pupils at the end of the same school year, compared to the number of pupils at the beginning of the school year.
- ▶ **Individual Education Plan (IEP)** is a special document which plans the additional support in education for a particular child and pupil, and its goal is to achieve the optimal child development, inclusion in the peer group and the meeting of educational needs of the child and pupil.
- ▶ **IEP 1** is an adjusted programme which plans the provision of support relating to the adjustment of the space and conditions in which learning takes place, the methods of work, textbooks and teaching aids, activities and their schedule, as well as persons who provide support.
- ▶ **IEP 2** is a modified programme, which anticipates the adjustment of the general outcomes of education, the adjustment of the specific standards of a pupil's attainment in relation to the prescribed ones, and the adapting of the contents for one subject or several or all subjects.
- ▶ **Interdepartmental Commission (IRK)** is a body appointed for the assessment of the needs for additional educational, health and social support to a child and pupil.
- ▶ **Primary and secondary school teachers** are all teachers employed in primary and secondary schools, both full-time and part-time.
- ▶ **Population aged 18–24 with lower secondary education and not in further education and training** generally refers to persons aged 18–24 who have finished no more than a lower secondary education and who have not been involved in further education and training in the period of four weeks preceding this survey, in the total population aged 18–24.
- ▶ **Students enrolled in tertiary education** are persons enrolled in first-degree academic studies, first-degree vocational studies, second-degree academic studies (Master's), specialist academic studies, specialist vocational studies, i.e. doctoral academic studies.
- ▶ **Participation of population aged 25–64 in education and training** is the number of persons aged between 25 and 64 who participate in any form of education and training as a percentage of the total population of that age.
- ▶ **Researcher** is a person with at least tertiary educational attainment, i.e. having at least completed first-degree academic studies and who is engaged in R&D work and holding the title pursuant to the Law. Depending on the achievements in R&D, the researcher can acquire the research title: researcher-apprentice and researcher-associate, and the scientific title: senior scientific associate and scientific advisor.

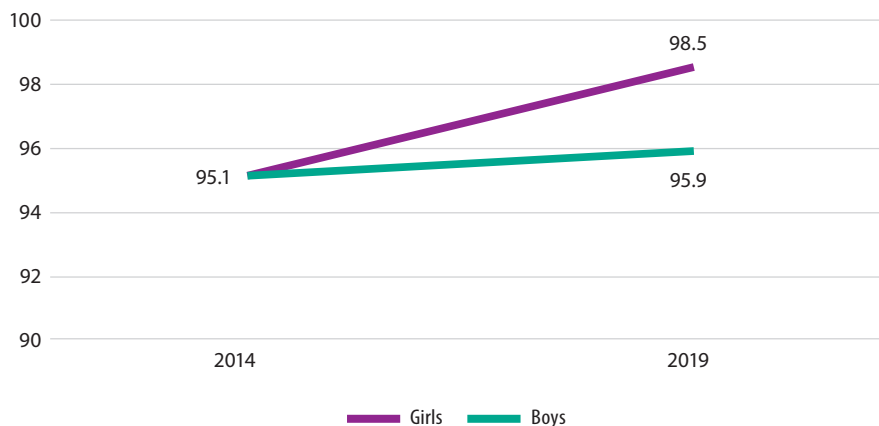

- **Assistant-researchers** do not hold any research title; work directly with researchers in carrying out professional or technical works relative to R&D (laboratory technicians, engineers and technicians of technical sciences, designers, librarians, information assistants, computer experts, language editors, etc.).

EMPLOYMENT

HIGHLIGHTS

- ▶ The activity rate of women with higher education is somewhat higher than the activity rate of men with the same level of education (72.3% vs. 71.0%). However, the activity rate of women without education and with low-level education is 31.5%, which is lesser than the activity rate of men with the same level of education by 30.2 percentage points (p.p.).
- ▶ The employment rate of women is 41.9%, which is by 14.7 p.p less than the employment rate of men (56.6%). As for married men and women, the gender gap is considerably smaller — the employment rate of married women equals 66% and is higher than the employment rate of married men, which equals 62%.
- ▶ The greatest gender gap on the labour market concerning employment is noted in the age category 55-64 years in which the employment rate of women is 40.5% and the employment rate of men is 60.8%.
- ▶ The employment rate of women aged 25 to 54 is lesser for 10.8 p.p. than the employment rate of men in the same age category (69.1% vs. 79.9%).
- ▶ Bearing in mind the reasons why men and women work less than full-time, category with the highest stake of women is "Looking after children or disabled persons" (87%), while men most frequently mentioned "Could not find a full-time job" (62%), as the reason for working less than full-time.
- ▶ There are twice as many self-employed among men than among women (in the age group 15 to 64, 25% of men and 14% women are self-employed).
- ▶ The share of informally employed women and men is larger among self-employed persons than among employed in all age groups. The largest number of informally employed are aged 15 to 24 (66.9% women and 55.3% men).
- ▶ The inactivity rate for women is higher by 15.6 p.p. than for men (52.9% vs. 37.3%). The largest gender gap considering inactivity occurs in the age group 55 and older, where the inactivity rate for women is 78.4% and for men it equals 61.6%.

DEFINITIONS

- ▶ **Active population** (labour force) includes all employed and unemployed persons aged 15 and over.
- ▶ The term **employed** in the Labour Force Survey implies persons who, in the week observed at least for an hour did some work for compensation (in money or in kind), as well as the persons with job (i.e. employed persons) who in the respective week were absent from work. Therefore, the Survey does not relate to the formal employment status of the surveyed persons, but the working/employment status is determined based on the real activity that interviewed persons practiced in the

respective week. Pursuant to the Classification of occupational status of employed persons, the following categories are defined: self-employed, employees and unpaid family workers.

- ▶ **Unemployed** persons are the persons who in the respective week did no work for remuneration, who undertook active steps to find a job during the four weeks preceding the referent week, and who were able to start working within two-week time after the referent week. Unemployed are also the persons who undertook no active steps to find a job during the previous four weeks, since they had already found a job and were about to start working after the referent week, however within the next three months latest.
- ▶ **Inactive population** consists of the population aged 15 and over who were not categorized under employed or unemployed population.
- ▶ **Activity rate** presents the percentage share of active population in the total population aged 15 and over.
- ▶ **Employment rate** presents the percentage share of employed population in the total population aged 15 and over.
- ▶ **Unemployment rate** presents the percentage share of unemployed population in the total number of active population aged 15 and over.
- ▶ **Long-term unemployment rate** is the percentage share of those who have been unemployed for a year or longer in the total active population.
- ▶ **Inactivity rate** is the percentage share of inactive population in the total population aged 15 and over.
- ▶ **Informal employment rate** represents the percentage share of persons working without formal contract in the total number of employment. This category includes the employed in unregistered companies, the employed in registered companies but without formal contract and without paying social and pension contributions, as well as unpaid family workers.
- ▶ The term **registered employment** comprises persons who have formal legal employment contract, i.e. who entered into employment with an employer for definite or indefinite period of time and persons who work on the basis of contract on performing temporary or occasional jobs, persons performing occupations/activities independently or who are founders of enterprises or unincorporated enterprises, as well as persons performing agricultural activities with records kept by the Central Register of Social Contributions Payers.
- ▶ **Registered unemployment** — Unemployed persons are persons between 15 years of age and the age eligible for retirement (or maximum 65 years of age), capable and immediately ready to work, who have not entered into an employment contract or exercised the right to work in any other way, who are found in the unemployment register and who seek job actively.

- **Employed person seeking change of employment** — is a person who is employed or otherwise exercises the right to work, yet actively seeks to change employment and is on the registry of persons seeking change of employment.
- **Entrepreneurs Register** is an integrated, central, electronic database where maintained and data on registered entrepreneurs (i.e. sole proprietors), companies, public enterprises and foreign company branches and representative offices, as well as on other forms of business organization (as prescribed by law).
- **Entrepreneur** is a legally capable natural person who performs activities for the purpose of generating income and who is registered as such in accordance with the law.

EARNINGS AND PENSIONS

HIGHLIGHTS

- ▶ The gender pay gap for 2018 equalled 8.8%, which means that women were paid by 8.8% less than men. Serbia is among the countries with the lowest gender pay gap in Europe. However, if earnings are observed according to educational attainment or occupations, the difference in earnings between women and men is significantly higher than the average gender pay gap, most often in favour of men.
- ▶ The proportion of women with low salaries and wages in the total number of employed women (18.0%) is higher than the proportion of men with low wages in the total number of employed men (17.8%).

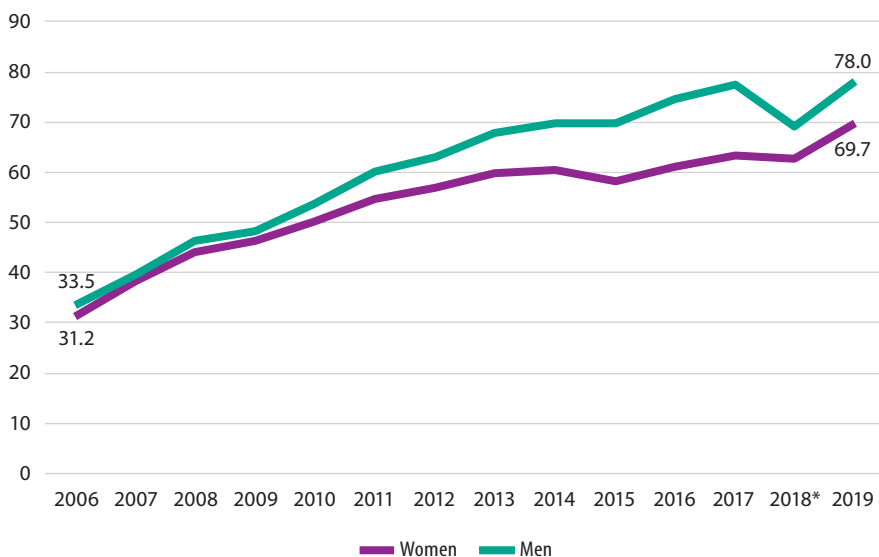

DEFINITIONS

- ▶ **Earnings** means all payments to employees on which the corresponding taxes and contributions are paid. Annual earnings consist of: payments for work with full, shorter than full or longer than full-time working hours (overtime), arrears or differences in wages, allowances for on-call time, night and shift work, work on Sundays and holidays, bonuses, regular monthly bonuses, transportation fees for commuting to and from work, remuneration for meals during work, as well as allowances for hours not worked (annual leave, paid leave, holidays, sick leave up to 30 days, leave due to professional training, a standstill in work not caused by workers' guilt). Earnings does not include remuneration: for sick leave longer than 30 days, for time spent on business trip in the country and abroad, for accommodation and food while doing fieldwork, for funeral services, for damages due to injury at work or occupational disease, as well as other incomes on which taxes and contributions are not paid.
- ▶ Unlike the concept of earnings, defined in Article 105 of the Labour Law, which includes regular earnings with taxes and contributions at the expense of the employee, as well as increased earnings, salary compensation, regular and periodic bonuses and other income on which taxes and contributions are paid, in this Structure of Earnings Survey the full amount of compensation for transportation costs for commuting to and from work are included.
- ▶ **The Gender pay gap (GPG)** represents the difference between average hourly earnings of employed men and of employed women as a percentage of average hourly earnings of employed men.
- ▶ **Median** is the value of the observed variable, which is located exactly in the middle of an ordered set of the population variable values.

- **Educational attainment** is the highest level of education for which an employee (a person) possesses an appropriate diploma, i.e. graduation degree of an accredited educational institution and these data represent the personal characteristics of employees, regardless of the occupation they perform.
- **Pension** is a monthly cash benefit to which an individual is entitled in respect of insurance for old age, disability, death and physical impairment. There are three categories of pensions: old age, disability and family pension. Beneficiaries can claim the right to an old age pension on the basis of years worked or age, and the right to disability pension is claimed on the basis of disability. In case of the death of the holder, the right to the pension is transferred to a family member. For this kind of pension there are no data on the beneficiaries' sex.

Average earnings of employees by sex, 2006–2019 (RSD thousand)

* Break of the time series – Average salaries are calculated on the basis of data obtained from the records of the Tax Administration (electronic tax return PPP-PD) and include the salaries and wages of all employees. Until 2018, the data refer to the salaries and wages of employees of legal entities.

LIVING STANDARD

HIGHLIGHTS

- ▶ In 2019 at-risk-of-poverty rate, by age and sex, was on the highest level for persons below the age of 18, and it equalled 29.3% for women and 28.6% for men. The lowest at-risk-of-poverty rate was recorded for men aged 65 years and over and equalled 18.3%, and for women aged 55–64, where it equalled 19.7%. Among persons aged 65 years and over, the difference in the level of at-risk-of-poverty rate by sex is largest, and it equalled 23.2% for women and 18.3% for men.
- ▶ In the period from 2017 to 2019, at-risk-of-poverty or social exclusion rate was highest for women and men aged below 24.
- ▶ At-risk-of-poverty rate by most frequent activity status in the labour market is calculated for the persons aged 18 and over, and in 2019 the lowest rate was recorded for employees working for employers. For women this rate equalled 6.4%, and for men it equalled 6.6%. The most exposed to at-risk-of-poverty were unemployed persons. For unemployed women this rate equalled 44.4%, while for unemployed men it equalled 50.5%.
- ▶ Severe material deprivation rate in 2019 was lower than in the previous two years, and for women the rate equalled 15.1%, while for men it equalled 14.0%.

DEFINITIONS

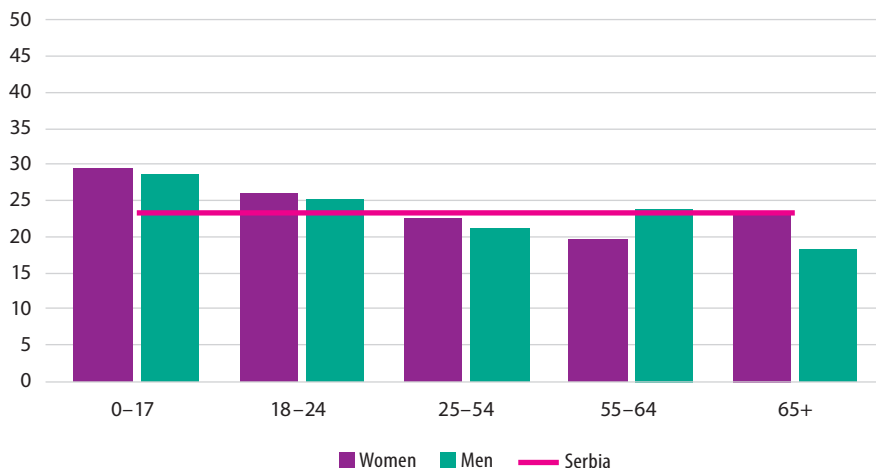

- ▶ **At-risk-of-poverty rate** represents the share of persons whose equivalised disposable income is below relative poverty line. It does not show the actual number of poor people, but rather how many of them have an income below the at-risk-of-poverty threshold.
- ▶ **At-risk-of-poverty or social exclusion rate (AROPE)** shows the share of individuals who are at risk of poverty or are severely materially deprived or live in households with very low work intensity.
- ▶ **Most frequent status in the labour market** refers to the activity status which the person had for at least 7 months during the reference period. It is calculated for persons aged 18 and over.
- ▶ **Severe material deprivation rate** is an indicator of financial inability of a household to afford at least 4 out of 9 items of material deprivation.

The material deprivation items are:

1. inability of the household to keep its home adequately warm,
2. inability of the household to afford the washing machine,
3. inability of the household to afford a car,
4. inability of the household to afford paying for one week annual holiday away from home,
5. inability of the household to afford unexpected financial expenses,
6. inability of the household to afford a telephone,
7. inability of the household to afford a colour TV,
8. inability of the household to afford a meal with meat, chicken, fish (or vegetarian equivalent) every second day,
9. being in arrears with mortgage or rent payments, utility bills, hire purchase instalments or other loan payments.

TIME USE

HIGHLIGHTS

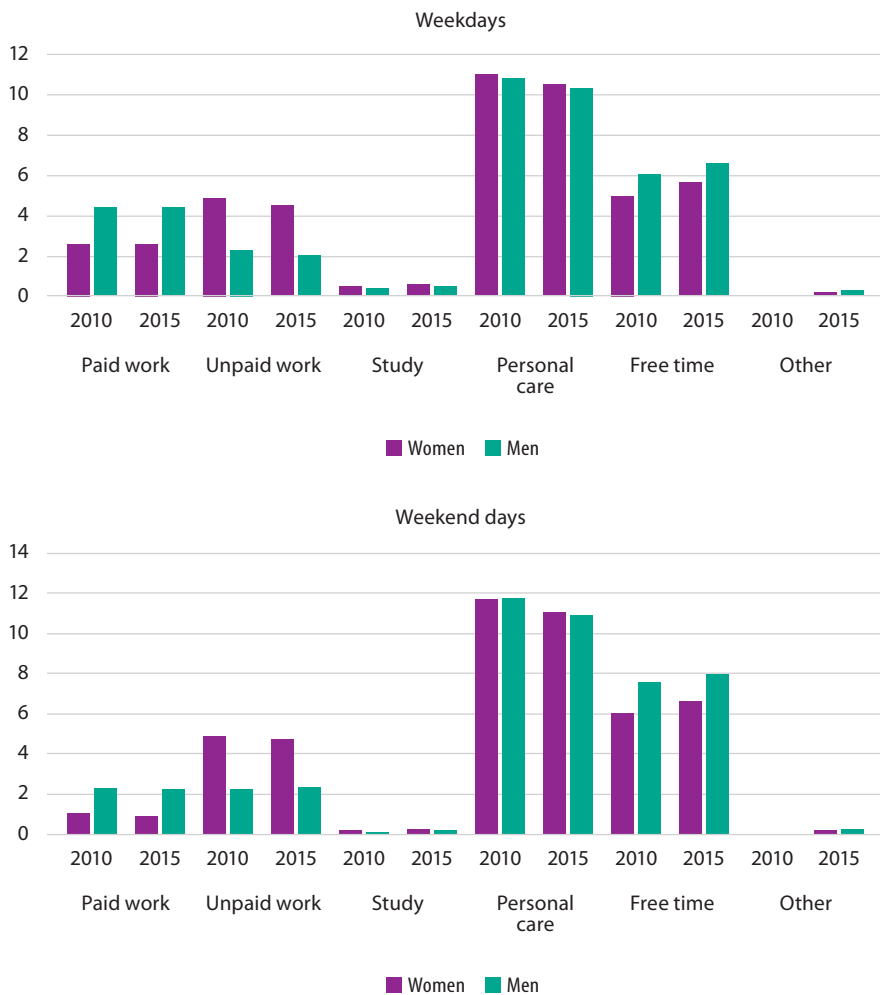

- ▶ The surveys on time use from 2010 and 2015 have confirmed the stereotypes that are valid for our region. Regardless of whether they are employed or not, women, in relation to men, work twice long time in the house, and spend half the time working paid jobs. For employed women, work in the house becomes the second shift.
- ▶ The data show that men do paid work, on weekdays and over weekend as well, almost twice longer than women. On the other hand, as expectedly, women spend more time than men doing unpaid work, both on weekdays and over weekend.
- ▶ Concerning the activities of personal care, both women and men spend more time doing this “work” on weekend days than on weekdays; namely, half an hour more on average.
- ▶ As free time activities are concerned, women spend one hour more on these activities over weekend than on weekdays, while men dedicate to them even one hour and a half more.
- ▶ Men from settlements other than urban work slightly over four hours, which is half an hour more when compared to men from urban settlements, while women from both types of settlements spend approximately the same amount of time on paid work — around two hours. Concerning unpaid work, both women and men from settlements other than urban spend more time on unpaid work.
- ▶ If we look at free time on weekdays, i.e. from Monday to Friday, and on weekends, in urban settlements both women and men have more free time.
- ▶ Married women with a child aged under seven, spend most time on unpaid work — almost an entire work shift. Men from this type of family structure spend more time on housework when compared to men from all other categories — almost three hours. However, women from all categories spend more time on housework, especially those with children of any age.

DEFINITIONS

- ▶ **Average time** is the average time spent on certain activities by all persons. It is calculated by dividing the total time spent in a given activity by the number of all interviewed persons.
- ▶ **Activities** are activities (actions) aggregated at the highest level, performed by respondents during the day.
- ▶ **Paid work** consists of time spent on the main and second job, lunch breaks during working hours, travel to/from work and other related activities.
- ▶ **Unpaid work** consists of cooking, cleaning and household upkeep, laundry and ironing, household repairs, shopping, child and adult care, travel related to unpaid activities, etc.
- ▶ **Total work** represents the sum of time spent in paid and unpaid work.
- ▶ **Study** includes time spent on attending school or university classes, doing homework, studying during free time, travelling and other study related activities.
- ▶ **Personal care** refers to the time spent on sleeping, eating and drinking, bathing, dressing and other personal care activities.
- ▶ **Free activities** refer to the time spent with family and friends, on entertainment, culture and sports, watching TV, resting, reading books, playing on the computer, and on travelling related to these activities.
- ▶ **Other activities (Other)** are activities that relate to unspecified activities and travel.

JUDICIARY

HIGHLIGHTS

- ▶ In 2019, 91% of all juveniles who were convicted of criminal offense were boys. The most expressive in numbers criminal offense for which juveniles were sentenced was serious theft: 22 girls and 306 boys. The highest percentage (30%) of juvenile perpetrators of criminal acts who have been convicted in the same year are girls aged 16 and boys aged 17 (32%).
- ▶ In 2019, for the most serious crimes, murder and serious murder, 7 women and 84 men were sentenced. In the same year, 184 women and 2443 men were convicted of the criminal offense of domestic violence. For the same offence, 83% of women and 69% of men were sentenced to imprisonment. The victims of domestic violence are mainly women (79%), while men make 21% of domestic violence victims.

DEFINITIONS

- ▶ **Convicted person** is a person found guilty and sentenced for the offence in question by courts of general jurisdiction in the referent year.
- ▶ **Convicted minor** is a person aged between 14 and 18 at the time when the crime was committed, who perpetrated a criminal offence and was sentenced to juvenile imprisonment or correctional measure.
- ▶ **Convicted adult** is an adult perpetrator pronounced guilty and sentenced. Adult perpetrators of criminal offences are those who, at the moment the criminal offence was committed, were over the age of 18.

DECISION-MAKING

HIGHLIGHTS

- ▶ Women account for only 6% among the presidents of municipalities/mayors, and for 31.3% among the members of the assemblies of the municipalities and towns/cities.
- ▶ In 2019, regarding all public prosecutor's offices women account for 39% of public prosecutors, and men account for 61%. Women are most represented at higher and basic public prosecutor's offices, by 38%, respectively, and as deputy public prosecutors at basic public prosecutor's offices women are represented by 62%. In the total number of deputy public prosecutors, the women to men ratio equals 58% to 42%. The share of women holding the position of deputy public prosecutor is lowest (25%) at the Organized crime public prosecutor's office; while the share of men on the position of deputy public prosecutor is lowest (38%) at the basic public prosecutor's offices.
- ▶ In 2019 at the courts of general jurisdiction women account for 70% of judges, and men for 30%. The women judges are mostly engaged at the courts of appeal, e.g. 77%. At the courts of special jurisdiction, 77% of judges are women, and 23% are men. The share of women is highest at the Misdemeanour court of appeals and equals 89%, while the share of men at the same court is lowest (11%).

DEFINITIONS

INTERNATIONAL INDICES

HIGHLIGHTS

- ▶ In this chapter presented are two European indices and four indices applied worldwide.
- ▶ The first European index discussed here is **Gender Equality Index** and it is presented through the index of gender equality and six domains of the index.
- ▶ The Republic of Serbia is the first non-EU country (EU-28) that introduced and calculated Gender Equality Index in 2016 (the year 2014 is referent for the statistical data). The index calculations are carried out on biennial basis (once in two years); therefore, here released are the index data for 2018.
- ▶ Of all European countries, Sweden expressed highest value of the Gender Equality Index for 2019 and it equalled 83.6, while the value for the European Union equalled 67.4. The lowest value was noted for Greece — 51.2.
- ▶ Gender Equality Index for the Republic of Serbia in 2018 equalled 55.8, while in 2016 it equalled 40.6; namely, for the two-year period the index recorded a considerable value growth, i.e. 15.2 index points.
- ▶ However, when the data are regarded by domains, namely six of them (work, money, knowledge, time, power and health), Serbia is lagging behind the EU-28 average in all gender equality domains. The least expressive gap is in the domain of work and health (3.3, i.e. 3.4, respectively), and the most expressive gap is in the domain of money (19.4).
- ▶ Another European index is **Gender Pay Gap**, for the calculation of which we use data of Structure of Earnings Survey. The data for the year 2018 indicate that in the Republic of Serbia the Gender Pay Gap equals 9.6%.
- ▶ In 2018 in the EU women earned on average by 14.8% less than men. The largest Gender Pay Gap among the all European countries was noted for Estonia and it equalled 22.7, while the smallest value of this index, equalling 3, was recorded for Romania.
- ▶ SDG¹⁴ gender index 2019 for the Republic of Serbia equals 74.9 and Serbia is on the position 34. The position number 1 is held by Denmark with its index being 89.3.
- ▶ **Gender Inequality Index** for Serbia, for 2018, equals 0.162. Related to 2016, Serbia has recorded a fall from the position 40 to the position 63. Switzerland occupies the top ranking (position number 1) with the index equalling 0.037.
- ▶ **Gender Development Index** for the Republic of Serbia slightly increased when related to 2015 and equals 0.976. However, the changed index value has not changed the Serbian ranking — Serbia still holds the position number 66. Norway still holds the top position (number 1), with the index equalling 0.990.

¹⁴ Sustainable Development Goals

- ▶ **Global Gender Gap Index** for 2020 for the Republic of Serbia equals 0.736, which puts Serbia on the position number 48, as in 2016. The position number 1 is held by Iceland with its index being 0.877.

DEFINITIONS

- ▶ **Gender Equality Index of the European Institute for Gender Equality (EIGE)** is a comprehensive indicator ensuring measure for the complex concept of gender equality in EU countries over time. The index is a sophisticated instrument that is used to implement the synthesis of numerous indicators in a measure that could be simply used and interpreted.
- ▶ **This index was developed to support more efficient policymaking in the domain of gender equality.** It is updated on biennial basis (once in two years), and its values are expressed on the scale from 1 (complete inequality) to 100 (complete equality).
- ▶ The index also features six domains: knowledge, work, money, health, time and power, as well as two sub-domains: violence and intersecting inequalities.
<https://eige.europa.eu/gender-equality-index/2020>
- ▶ **Gender Pay Gap** refers to the difference in the average salaries between men and women and represents the percentage share of the employed men to women difference between average working hour pay in the average working hour pay for men.
http://ec.europa.eu/eurostat/statistics-explained/index.php/Gender_pay_gap_statistics
- ▶ In this chapter we use the data provided for international comparisons, and it does not include the Section O — Public administration and defence; compulsory social security; this is in compliance with the EU regulations which stipulate that the inclusion of the mentioned section in the coverage of this survey is optional.
- ▶ **The SDG Gender Index** represents the most comprehensive tool to measure overall progress towards gender equality that is aligned to the SDGs. The index goes beyond SDG 5 on gender equality to highlight issues across 14 of the 17 goals that are crucial to gender equality and to creating an enabling environment for gender equality including issues such as climate change, energy and tax and public finance.

- The index is based on 51 indicators that provide the 'big picture' across the SDGs as well as for progress towards gender equality in individual goals. The index is defined and driven by the needs of gender advocates, policymakers and stakeholders across different sectors at the community, national, regional and global levels.

<https://data.em2030.org/2019-sdg-gender-index/explore-the-2019-index-data/>

- **Gender Inequality Index** — Gender inequality remains a major barrier to human development. Girls and women have made major strides since 1990, however still they have not gained gender equity. All too often, women and girls are discriminated against in health, education, political representation, labour market, etc. — with negative consequences for the development of their capabilities and their freedom of choice.

http://hdr.undp.org/sites/default/files/hdro_statistical_data_table5.pdf

- **Gender Development Index** — GDI measures gender gaps in human development achievements by accounting for disparities between women and men in three basic dimensions of human development — health, knowledge and living standards using the same component indicators as in the HDI. It is a direct measure of gender gap showing the female HDI as a percentage of the male HDI.

<http://hdr.undp.org/en/content/gender-development-index-gdi>

- **Global Gender Gap Index** — The Index benchmarks national gender gaps based on economic, education, health and political criteria, and provides country rankings that allow for effective comparisons across regions and income groups.
