INTRODUCTORY NOTES

Measurement of regional economic performance has always been among the priorities in the statistical system of the European Union (EU) and has become increasingly important in the Republic of Serbia due to severe regional discrepancies in economic and social development. These discrepancies are caused mainly by the differences in economic structure, productivity of labour force and efficiency of business operations of economic subjects in the Republic of Serbia. Regional accounts, as a system of regional statistical indicators, are thus regarded as indispensable tools for strategic planning of regional development and effective regional policymaking, as well as for evaluation and monitoring of plans and programs of cohesive policy on the national and the European level. Regional gross domestic product (GDP) is regarded as the headline indicator used for measuring the regional economic performances and the effectiveness of the regional policies and programs aimed at reducing the gaps between the regions in socio-economic development and distribution of the national wealth.

This paper summarizes the concepts, sources and methods used in the process of estimating the regional gross domestic product (GDP) of the Republic of Serbia for 2024 (preliminary data), along with previously revised data for 2023 and final data for 2022, based on the results of the supply and use tables, and aligned with the results of the national GDP revision implemented in 2025.

MAIN METHODOLOGICAL PRINCIPLES

The calculation of regional GDP, as a part of the system of national accounts of the Republic of Serbia, was made in accordance with EU principles and methodology, i.e. the *European system of national accounts* (ESA 2010) and the *Nomenclature of statistical territorial units* of the Republic of Serbia (*NSTJ*), which has been harmonized with the European Nomenclature of territorial units for statistics (NUTS). The main conceptual reference for the Serbian regional GDP is the Eurostat's *Regional Accounts Methods* manual. The calculations of regional GDP were carried out at the NUTS level 2 (regions) and NUTS level 3 (areas) for the following statistical territorial units:

- Beogradski region/area
- Region Vojvodine and areas: Zapadnobačka oblast, Južnobanatska oblast, Južnobačka oblast, Severnobanatska oblast, Severnobačka oblast, Srednjobanatska oblast and Sremska oblast;
- Region Šumadije i Zapadne Srbije and areas: Zlatiborska oblast, Kolubarska oblast, Mačvanska oblast, Moravička oblast, Pomoravska oblast, Rasinska oblast, Raška oblast and Šumadijska oblast.
- Region Južne i Istočne Srbije and areas: Borska oblast, Braničevska oblast, Zaječarska oblast, Jablanička oblast, Nišavska oblast, Pirotska oblast, Podunavska oblast, Pčinjska oblast and Toplička oblast.

Presently, for Region Kosovo i Metohija, no reliable statistical data are available and it was not covered by the calculations. In accordance with the ESA 2010 and the Eurostat methodology of regional accounts, as a separate statistical territorial unit displayed is "*extra regio*", i.e. extraterritorial units of the Republic of Serbia (ESA 2010, paragraph 13.11). Those are diplomatic and consular missions, embassies of the Republic of Serbia abroad and in other parts of the economic territory of the Republic of Serbia outside its territorial boundaries. Gross value added calculation for *extra regio* is based on data from the Ministry of Foreign Affairs of the Republic of Serbia on the employed citizens of the Republic of Serbia in these units. According to ESA 2010 (paragraph 13.44), data on GDP per capita and the corresponding indices are not expressed for *extra regio*.

Regional gross domestic product is the regional equivalent to a country's GDP which represents the most important macroeconomic aggregate of a national economy and measure of its productivity and efficiency in the production of goods and services needed for various types of consumption. The sum of GDP for each region is identical to the GDP of the Republic of Serbia. Gross value added created by all resident economic subjects of the Republic of Serbia is a starting point for the calculation of GDP and its regionalization i.e. estimation of the contribution of each regional entity to the total GDP. The relation between GDP, gross value added (GVA) and regional GDP can be shown using the following equations:

GDP – the sum of gross value added of the institutional sectors or of the industries, plus taxes on products and imports and less subsidies on products (subsidies directly linked to the volume or value of production).

GVA – the total value of output of goods and services produced less the intermediate consumption (goods and services used up in the production process in order to produce the output).

Regional GDP – the sum of value added of all local units that are active in the territory of the subject region (plus taxes on products less subsidies on products).

METHODS OF REGIONALIZATION

The regionalization of gross value added (GVA) is based on the *workplace principle* i.e. by using the economic data on local units of enterprises where the value added is actually created. This principle of regionalization of GVA has special significance if we take into account the fact that the large economic systems representing the „backbone“ of the Serbian economy (including large public enterprises and government bodies and institutions) have in general wide geographic dispersion of their organizational units (plants, establishments, offices etc.), and each of them represents a significant centre of economic activity on the territory of the municipality and region where it is situated. GVA of these enterprises is allocated on the regions where their local units and employees are situated and where the production process has taken place and not in the regions where their headquarters are registered.

For business enterprises belonging to the sector of non-financial corporations, so called “bottom up” method was used as the main technique for regionalization of GVA in line with the experience and methodology of the Swedish statistics. The same principle is applied for non-profit institutions serving households. For financial institutions, the data on wages and salaries, together with the data on deposits and credits (for banks) and gross premiums written (for insurance business) on municipal level were used for the regionalization of GVA of each enterprise in full accordance with the Eurostat’s recommendations. For the general government sector, the data on wages and salaries collected via special survey are used for the distribution of GVA of each entity on its belonging local units on municipal level.

The starting point for the calculations of regional GDP represents the SBR of local units of enterprises which is managed and operated by the SORS. The large majority of companies and sole-proprietorships are mono-unit enterprises or with a few units operating within the same municipality. For these enterprises GVA is directly ascribed to the region of the headquarters of the enterprise i.e. municipality where it is registered and conducts its business activities. On the other side, the “regional profile” of each enterprise conducting economic activity in more than one municipality is defined by comparison and cross-checking of the data derived from several statistical and administrative data sources. The data on local units (NACE and municipality code, number of employment and wages and salaries) are thoroughly checked and determined the number of employed, staff costs and then the share of each local unit in the GVA of the enterprise it belongs to. All enterprises with more than one local unit in different municipalities were processed this way thus founding the basis for regional distribution of GVA and, eventually, the derivation of regional aggregates.

Having calculated the GVA on the level of each local unit, the area and regional figures are derived by aggregating the GVA of all local units belonging to the same area and region.

DATA SOURCES

Apart from financial statements as primary data source, for deriving regional GDP calculations the following administrative and statistical data sources are used:

- For the non-financial sector of incorporated enterprises – a regional data module within the annual structural business survey with data on number of employees, gross wages and salaries and other economic indicators for local units of enterprises on municipality level are collected. Moreover, this module includes data on stocks of capital goods and depreciation costs on local unit level. As supplementary sources used were the data of the Central Register of Social Contributions Payers (CRSCP) on the number of employment in local units of enterprises and the statistical survey on local units of economic subject.
- For the financial sector (banks and the central bank, i.e. the National Bank of Serbia, insurance companies, companies for financial leasing, pension and investment funds, broker and dealer companies and other financial institutions) – the annual survey KGI-02, which compiles data for financial institutions on the level of local units: data on number of local units, employment and wages and salaries on municipality level. Also, it covers data on loans, deposits and commissions and fees (for the banks) and gross premiums written (for insurance business), also on municipality level, which are used as key tools for the regionalization of GVA of institutional units belonging to the financial corporations sector, namely for value added allocation to local units.
- For the general government sector, i.e. government bodies and institutions – KGI-03 survey that annually collects data on employees from the CRSCP database. In order to collect data on distribution of employees and wages and salaries by municipalities, the SORS Regional accounts division has conducted a survey which covers the major government institutions with the largest territorial dispersion of the units. The following institutions were covered by this special survey: Ministry of the Interior, Ministry of Defence, State Tax Administration, State Customs Administration, National Employment Service, Pension and Disability Insurance Fund, National Health Insurance Fund, Serbian Statistical Office (SORS), Hydro-meteorological Office, Republic Geodetic Authority and PE Post of Serbia. The GVA calculations for non-market institutional units that belong to the government sector are implemented by applying the expenditure approach in compliance with the ESA 2010 methodology.
- For the households sector – data provided by the Tax Administration on tax payers based on income from own-account activities and estimations based on statistical surveys concerning economic activities. Apart from unincorporated enterprises (sole proprietorships and partnerships), this sector includes other self-employed persons, such as persons who achieve contracted fee as the only income source ("outworkers") and farmers. In addition, the GDP of household sector covers net receipts from renting, i.e. household income resulting from the private renting of dwellings. Namely, according to the principles of national accounts, this income includes also so-called imputed rentals for owner occupied dwellings, i.e. imputed value of income that could be received by owners of private dwellings by renting them to other persons. This estimate is based on the data on dwelling stock on the territory of certain region and on average unit price of real estates.
- For the sector of non-profit institutions serving households (NGOs, non-market citizen associations and organizations etc.) – database of financial statements for other legal entities and employment data for their local units provided by CRSCP.

For each of these institutional sectors the specific methods for calculating output value (market and non-market output) and value added were applied, in accordance with the methodological guidelines provided by ESA 2010.

◆ Results of calculation – regional GDP, shares of regions in total GDP of the Republic of Serbia and level indices

Table 1. Results of calculation – regional GDP, shares of regions in total GDP of the Republic of Serbia and level indices

Territory	GDP (RSD million)		Index	Share (%)		GDP per capita (RSD thousand)		GDP per capita – Level Index ¹ (RS = 100)	
	2024	2023	2024/2023	2024	2023	2024	2023	2024	2023
REPUBLIC OF SERBIA	9 748 259	8 817 908	110.6	100.0	100.0	1 480	1 331	100.0	100.0
Beogradski region	4 208 949	3 801 129	110.7	43.2	43.1	2 501	2 258	169.0	169.6
Region Vojvodine	2 351 631	2 186 158	107.6	24.1	24.8	1 363	1 261	92.1	94.7
Region Šumadije i Zapadne Srbije	1 693 262	1 500 128	112.9	17.4	17.0	943	829	63.7	62.3
Region Južne i Istočne Srbije	1 491 062	1 327 538	112.3	15.3	15.1	1 078	951	72.8	71.5
<i>Extra regio</i>	3 355	2 955	113.5	0.0	0.0	-	-	-	-
Region Kosovo i Metohija

According to the estimation principle of workplace, the regions of the Republic of Serbia had the following shares in the national GDP: Beogradski region holds the leading position with 43.2%, Region Vojvodine expressed the share of 24.1%, and then come Region Šumadije i Zapadne Srbije – 17.4% and Region Južne i Istočne Srbije – 15.3%.

For Beogradski region, with GDP per capita amounting to RSD 2 501 000 (EUR 21 363)², notable is by 69.0% higher per capita amount compared to the national average. The GDP per capita level index for Region Vojvodine equals 92.1% (RSD 1 363 000/EUR 11 643), which is approximately by 2.6% lower if compared to 2023. The GDP per capita level index for Region Šumadije i Zapadne Srbije equals 63.7% (RSD 943 000/EUR 8 052), which means it increased by 1.4% when related to 2023. For Region Južne i Istočne Srbije the level index equals 72.8% (RSD 1 078 000/EUR 9 211), which is by 1.4% higher when related to 2023.

Regarding the dispersion of the regional GDP per capita, amount in 2024 it equalled 35% (35% in 2023). Concerning the level of areas (districts), it equals 42% (42% in 2023). According to the Eurostat methodology, dispersion of regional GDP per capita indicates the average (absolute) difference between national and regional GDP per capita values. The value of this indicator is expressive of the fact that there was no change in the dispersion of the GDP regional per capita amount.³

¹The level index represents the ratio between the GDP per capita of a region and the national GDP per capita. It does not indicate the growth of a region's GDP compared to the previous year; rather, it shows whether the region's GDP per capita is higher or lower than the national level. When the level index is greater than 100, it means that the region's GDP per capita is higher than the national average. When it is below 100, it indicates that the region's GDP per capita is lower than the national level.

² Average official exchange rate of the National Bank of Serbia for the year 2024.

³ Dispersion of regional gross domestic product is a measure of cohesion of economic development of regions shows the average difference between the national and regional levels of GDP per capita. This indicator is available at NUTS 2 and NUTS 3 level, ie. at levels NSTJ2 (region) and NSTJ3 (district) of the *National Nomenclature of Territorial Units for Statistics*. Dispersion of regional gross domestic product is measured by the sum of the absolute differences between regional and national GDP per inhabitant, weighted with the regional share of population and expressed in percent of the national GDP per inhabitant.

For a given country the dispersion D of regional GDP per inhabitant is defined as the sum of the absolute differences between regional and national GDP per inhabitant, weighted with the regional share of population and expressed in percent of the national GDP per inhabitant:

$$D = \frac{100}{Y} \sum_{i=1}^n |y_i - Y| \left(\frac{p_i}{P} \right)$$

In the above equation:

y_i - regional GDP per inhabitant of region i ;

Y - national average GDP per inhabitant;

p_i - population of the region/area i

P - population of the country

n - number of regions/areas

◆ Regional GDP expressed in PPS

In the following table, the regional GDP expressed in PPS (purchasing power standard) and the comparison of the Serbian regions with EU27 indicators are presented. As we can see, the Belgrade Region is the only region exceeding the threshold of 85% of the EU average GDP per capita, reaching 87.2%. The remaining regions are below this threshold, with the Region of Šumadija and Western Serbia at the lowest level, at 32.9%.

Table 2. Regional GDP expressed in PPS
