PREFACE

“Statistical Pocketbook of the Republic of Serbia” is an edition released by the Statistical Office of the Republic of Serbia that offers the main statistical data on the national social and economic development. The selection of data was made in compliance with the requirements and interest of the wide circle of users, from the primary school pupils to the old people category.

The Statistical Office of the Republic of Serbia took efforts to provide the latest data according to the accomplished surveys. The publication came an outcome of all statistical surveys conducted pursuant to the unified program. With this regard we are free to see this publication as a joint venture undertaken by the statistical information system. Apart from the statistics produced by SORS, this pocketbook contains the data taken from the National Bank of Serbia, the Ministry of the Interior, the Ministry of Justice, the Ministry of Labour, Employment, Veteran and Social Affairs, the Public health institute “*Dr Milan Jovanović Batut*”, the National fund for pension and disablement insurance, the National employment service, the Hydro-meteorological service of Serbia, and other institutions as well.

Starting from 1999 the Statistical Office of the Republic of Serbia does not have at disposal certain data relative to AP Kosovo and Metohia; therefore, these data are not included in the coverage for the Republic of Serbia (total).

Belgrade, April 2025

Acting director

Branko Josipović

Source: Faculty of geography, Belgrade

Notes: In the total river length, the source parts with another name were not included. However, for the major rivers in footnotes given are their major composite rivers with the respective lengths. As a rule, the river starting point is taken to be the most distant source flow, regardless of the water quantity (length principle), which results in the changed established dimensions (e.g. the river Ibar)

¹⁾ 2860 km with the converging river Breg

²⁾ 492 km with the river Tara

³⁾ 295 km with the river Binačka Moravica.

⁴⁾ 276 km with the Županica, 284 km with the rivers Sitnica and Nerodimka

⁵⁾ Through the Zapadna Morava river: 467 km with the river Golijška Moravica, 542 km with the Ibar and Županica rivers, 550 km with the Ibar, Sitnica i Nerodimka rivers

⁶⁾ 282 km with the Golijška Moravica, 353 km with the Ibar (source), 357 km with the Ibar and Županica rivers, 365 km with the Ibar, Sitnica and Nerodimka river

⁷⁾ 140 km with the Lipa

⁸⁾ 171 km with the Pečka Bistrica

⁹⁾ 188 km with the Crni Timok and the Crnovrška river

¹⁰⁾ 126 km with the Obnica

¹⁾ Indicator value changed due to the revised territorial area of the Republic of Serbia

²⁾ The census data in the period from 1948 to 1981 relate to the entire territory of the Republic of Serbia. The 1991 Census of Population, Households and Dwellings was not fully carried out in the municipalities of Bujanovac and Preševo within Central Serbia, nor in the territory of the AP Kosovo and Metohija, as it was boycotted by the majority of the Albanian population.

The censuses of 2002, 2011, and 2022 were not conducted in the territory of the AP Kosovo and Metohija due to the lack of necessary conditions.

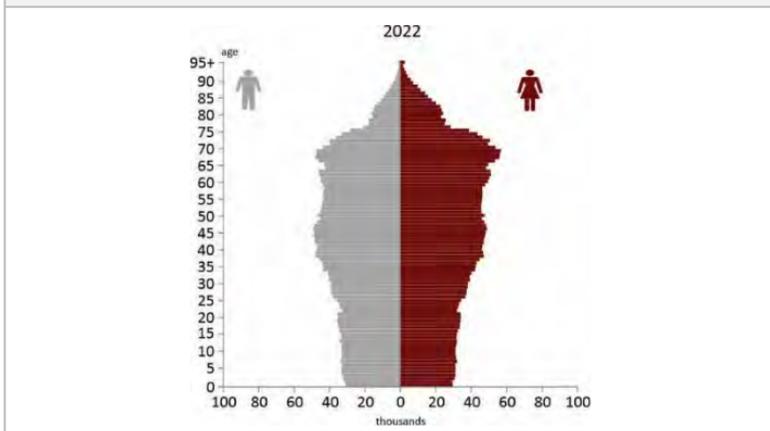

³⁾ In 2011 Census recorded was under-coverage of census units owing to the boycott by the majority of the Albanian ethnic community in the municipalities of Preševo and Bujanovac.

Chain indices of agricultural production, 2022–2024

Previous year = 100

Part I

| | Agriculture, Total ¹⁾ | Crop production | | | |
|------|-------------------------------------|-----------------|--------------|---------------|-------------|
| | | All | Crop farming | Fruit growing | Viticulture |
| 2022 | 91.9 | 88.7 | 83.3 | 109.3 | 104.3 |
| 2023 | 108.5 | 115.5 | 127.1 | 80.6 | 81.0 |
| 2024 | 91.6 | 87.9 | 85.7 | 98.7 | 98.6 |

¹⁾ Indices computed on the basis of the index list that includes 56 major agricultural products. The production which is statistically established. Three-year fluctuating average values of producer prices on the level of Republic of Serbia were taken as weighting coefficients. Total agricultural production index was computed on the basis of final net production.

Chain indices of agricultural production, 2022–2024

Previous year = 100

Part II

| | Livestock breeding | | | | |
|------|--------------------|----------------------------------|--------------|---------------------------------|-----------------------------------|
| | All | Cattle breeding ¹⁾ | Pig breeding | Sheep breeding ²⁾ | Poultry Breeding ³⁾ |
| 2022 | 98.7 | 95.9 | 97.2 | 101.7 | 98.9 |
| 2023 | 94.7 | 93.1 | 94.2 | 96.4 | 101.0 |
| 2024 | 101.4 | 97.0 | 103.6 | 100.0 | 106.6 |

¹⁾ Increase of cattle and cow's milk production

²⁾ Increase of sheep, wool and sheep milk production

³⁾ Increase of poultry and eggs production

Housing stock, by censuses ¹⁾²⁾

Republic of Serbia

| | Number of dwellings, thousand | Floor space, thousand m ² | Average floor space, m ² | Average floor space per capita, m ² | Average number of occupants per dwelling |
|------------|-------------------------------|--------------------------------------|-------------------------------------|------------------------------------------------|------------------------------------------|
| 31.03.1971 | 2 154 | 104 631 | 48.6 | 12.4 | 3.9 |
| 31.03.1981 | 2 581 | 155 121 | 60.1 | 16.8 | 3.6 |
| 31.03.1991 | 2 852 | 192 144 | 67.4 | 19.6 | 3.4 |
| 31.03.2002 | 2 744 | 181 206 | 66.0 | 23.9 | 2.8 |
| 30.09.2011 | 3 013 | 217 849 | 72.3 | 30.6 | 2.4 |
| 30.09.2022 | 3 260 | 247 488 | 75.9 | 37.6 | 2.0 |

¹⁾ The census data for the years 1971 and 1981 relate to the entire territory of the Republic of Serbia, while the censuses of 1991, 2002 and 2011 and 2022 do not provide the data for the AP Kosovo and Metohija, 1991 Census was boycotted by the majority of the Albanian population, while in 2002, 2011 and 2022 no (adequate) conditions were ensured on the territory of the southern Serbian province for the implementation of the census.

²⁾ Housing stock covers occupied, temporary occupied and abandoned/unoccupied dwellings; however not included are those dwellings that are casually intended for leisure time and recreation, or for seasonal agricultural work; also excluded are dwellings that are used exclusively for business purpose, i.e. activities.

The state symbols of the Republic of Serbia are the the coat of arms and the national flag.

The Coat of Arms, i.e. heraldic symbol represents a double-headed white eagle, with a shield, a Greek cross, four fire steels and the crown of the Nemanjić dynasty.

The national flag is trobojka (the tricolour: red, blue and white) with horizontal stripes, and a small Serbian coat of arms, depicted centrally and by one seventh part of the flag length towards the mast.

Coat of arms of the Republic of Serbia ¹⁾

National flag of the Republic of Serbia ¹⁾

“God of Justice” is the official anthem of the Republic of Serbia as defined pursuant to the Constitution, Article 7. “God of Justice” used to be the anthem of the Principality of Serbia and the Kingdom of Serbia until 1918. The proposed version of the text as the anthem was established by the Law passed on 11 May 2009. The original song was composed in 1872 when Jovan Đorđević, inspired by the satirical National anthem of Zmaj, wrote the lyrics for the music by Davorin Jenko, which came as the closing part of the theatre performance Markova sablja (Marko’s Sabre), dedicated to mark the coming of age of Milan Obrenović. The immense popularity of the lyrics and the melody resulted in this song becoming the Serbian state anthem.

O god of justice ¹⁾

(Serbian National Anthem)

God of Justice; Thou who
saved us when in deepest
bondage cast, Hear Thy
Serbian children's voices,
Be our help as in the past.

With Thy mighty hand
sustain us, Still our rugged
pathway trace; God, our
hope; protect and cherish
Serbian lands and Serbian
race!

Bind in closest links our
kindred Teach the love that
will not fail, May the loathed
fiend of discord Never in our
ranks prevail.

¹⁾ www.srbija.sr.gov.rs

Let the golden fruits of
union Our young tree of
freedom grace; God, our
Master! guide and prosper
Serbian lands and Serbian
race!

Lord! Avert from us Thy
vengeance, Thunder of
Thy dreaded ire; Bless each
Serbian town and hamlet,
Mountain, meadow, heart
and spire.

When our host goes forth to
battle Death or victory to
embrace-God of armies! Be
our leader Strengthen then
the Serbian race!

On our sepulchre of ages
Breaks the resurrection
morn, From the slough of
direst slavery Serbia anew is
born.

Through five hundred years
of durance We have knelt
before Thy face, All our kin,
O God! deliver, Thus en-
treats the Serbian race!

EXIT

EXIT is the major music festival in the South-East Europe. It has been organized since 2001, on the magnificent Petrovaradin Fortress in Novi Sad. The number of visitors coming to the festival has been increasing. Young people arrive from all parts of our country and from other European countries as well. Except for its top-quality music program, people use to visit EXIT for good quality entertainment, nice atmosphere and positive energy felt in the city.

GUČA

The first Dragačevski Sabor Trubača (Dragačevo gathering of trumpeters) was held in 1961. In the last ten years Guča has become internationally recognized capital of the trumpet. Trumpet players and folk music and dance ensembles from the world are deeply honored to be invited to Dragačevski Sabor and visitors arrive from Mexico, Spain, Greece, Denmark, China... Virtuoso musicians that we could meet and listen to in Guča are largely completely self-educated. They play following their sense of hearing and quite spontaneously, relying on musical memory. Their music comes from their soul and heart and audience is delighted just for these qualities.

The number of visitors is ever-increasing from year to year; the record visit was achieved in 2009 when Guča welcomed over 600 000 visitors.

FEST

FEST is an international film festival that has become a must-see event in the cultural life of Belgrade.

The first FEST, named "The brave new world" was opened on 9 January 1971 at Dom Sindicata, Belgrade, with the projection of Robert Altman film MASH. Conceived as an annual crossection of the best films, FEST has become a mayor event in the cultural life of Belgrade.

Ever since its start, FEST has been widely open for the whole world cinematography, for all respectable authors, however also for the films that would not be included in wide cinema repertoire.

BITEF

Belgrade International Theater Festival (BITEF) was initiated in 1967 and then from it has continually followed and acknowledged the latest trends of theater art. As the festival grew and developed, it has become one of the top five European festivals and it won a most respectable place in the world theater map. The importance of BITEF is strong enough to overcome all political and cultural boundaries. Therefore the history of BITEF may be regarded as the history of modern theater art.

BELGRADE SUMMER FESTIVAL – BELEF

The spirit of Belgrade in summer is described and confirmed by BELEF, Belgrade Summer Festival. The festival comprises three major art domains: stage art (theater and dance), visual arts (videoart, installations, performances and prints) and music. Through a series of visiting presentations, BELEF own production and co-production with cultural institutions, summer festivals of the same kind, BELEF induces further engagements, upbringing and development of creative potentials, interest and researching force of individuals and audience at large.

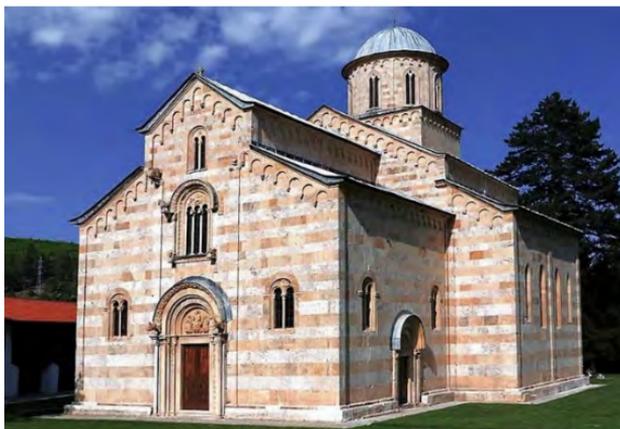

Interacting with the environment, animating new urban areas and sites of cultural happenings, the Belgrade Summer Festival eagerly tells a story of Belgrade as a large city and its tolerant, communicative and urban nature.

|--------------------------------|-----|
| Basic principles of statistics | 125 |
| Information technology | 132 |
| Measurements | 133 |
| Chemical elements | 140 |
| Miscellaneous | 144 |

Basic principles of statistics

Statistics is a science that study mass phenomena, with the aim to find out their quantitative characteristics, while three-fold contents are assumed: descriptive statistics (data collection, processing), statistical analysis (taking conclusions and establishing regularity) and statistical theory (explaining statistical methods).

The set of all elements where certain phenomenon is statistically observed is called statistical set, basic set, population.

Elements or units of a set are individual elements that the set consists of.

Feature is a characteristic of population members (elements).

Frequency represents the number of appearances of set elements.

Measurement scales

Nominal scale: Phenomena that can be classified only by certain number and modality type are measured on this scale. The scale is used to describe the title/name, descriptive property, etc.

Ordinal scale reduces the modalities of a phenomenon to ranging them by importance regarding the adopted criteria and by numbers denoting the range; however, they do not indicate the extent of their difference.

Interval scale and scale of relations indicate the sequence of modalities and the extent of their difference. These scales are often referred to as cardinal scales.

Methods of data collection

Statistical census assumes statistical observation where all observation units of a statistical set are included, in so-called “critical moment”.

Statistical sample is a part of the basic set, and the purpose of selecting it is to obtain valid information on the characteristics of the whole set as promptly as possible while incurring lowest possible costs.

Statistical report represents the scanning of all changes in a statistical set for successive time intervals.

Data series

Statistical series are series of arranged statistical data that present the structure of a set by some feature, or the layout of a set in space or the change of a set over time.

Structural series represent the sequence of a statistical set by modalities, i.e. by feature values.

Time series are series of statistical data that indicate variations of phenomena in time, and they are classified as momentary and intervals.

Momentary series represent a size or extent of a phenomenon in precisely defined successive time moments.

Interval time series indicate the development of a phenomenon in successive time intervals.

Panel data consist of time series by which the level of certain phenomenon is measured, however for each observation unit from the structural series.

Descriptive statistics

Arithmetic mean value of a set, i.e. the average level of a phenomenon is calculated by dividing the sum of all feature values by the number of them:

$$\mu = \frac{x_1 + x_2 + \dots + x_n}{N} = \frac{1}{N} \sum_{i=1}^n x_i$$

where x_1, x_2, \dots, x_n are the feature values X , and N is the number of values.

For the sample size n , arithmetic mean of ungrouped data is calculated:

$$\bar{x} = \frac{1}{n} \sum_{i=1}^n x_i$$

Arithmetic mean (grouped data):

$$\mu = \frac{1}{N} \sum_{i=1}^k f_i x_i$$

where $N = \sum_{i=1}^k f_i$, x_i are various feature values, f_i is the respective frequency.

Geometric mean is the mean value that levels the relative changes of the data values.

$$G = \sqrt[N]{x_1 x_2 \dots x_N}$$

where x_1, x_2, \dots, x_N are the feature values X .

Geometric mean (grouped data):

$$G = \sqrt[N]{x_1^{f_1} x_2^{f_2} \dots x_k^{f_k}}$$

where $N = \sum_{i=1}^k f_i$.

where $N = \sum_{i=1}^k f_i$.

Modus is the feature value with the highest frequency in the series and therefore is the most typical value of the series:

$$M_o = L_1 + \frac{f_2 - f_1}{(f_2 - f_1) + (f_2 - f_3)} i$$

where L_1 is modal interval bottom limit, i is the length of group interval, and f_1, f_2, f_3 are frequencies of pre-modal, modal and post-modal interval.

Median is the feature value found in the middle of a series arranged by feature size, i.e. the feature value dividing the sum of all frequencies into two equal parts, in a way that one half has smaller, and other one has higher value than median:

$$M_e = L_1 + \frac{\frac{N}{2} - \sum f_1}{f_{M_e}} \cdot i$$

where L_1 is the bottom limit of median interval, N is the number of member of the series,

$\sum f_1$ is the sum of frequencies of the pre-median interval, f_{M_e} is the frequency of median interval and i is the length median interval.

Variance σ^2 is the average of squared deviation of certain feature values from the arithmetical mean value.

For ungrouped data:

$$\sigma^2 = \frac{1}{N} \sum_{i=1}^N (x_i - \mu)^2$$

For grouped:

$$\sigma^2 = \frac{1}{N} \sum_{i=1}^k f_i (x_i - \mu)^2$$

Standard deviation σ is the absolute measure of variation.

For ungrouped data:

$$\sigma = \sqrt{\frac{1}{N} \sum_{i=1}^N x_i^2 - \mu^2}$$

For grouped:

$$\sigma = \sqrt{\frac{1}{N} \sum_{i=1}^N f_i x_i^2 - \mu^2}$$

Sample variance:

$$S^2 = \frac{\sum f_i (x_i - \bar{x})^2}{n-1}$$

Standard sample deviation:

$$S = \sqrt{\frac{\sum f_i x_i^2 - n\bar{x}^2}{n-1}}$$

Coefficient of variation:

$$V = \frac{\sigma}{\mu}$$

Standardized deviation represents the general measure of individual data deviation from the arithmetic mean value:

$$z = \frac{X - \mu}{\sigma}$$

Sample and sample statistics

Intentional sample is created from the set units that are selected as believed to be representative for the given basic set.

Judgment sample is obtained when each sample unit is selected according to the researcher's personal choice, based on the belief that in this way the representative sample is obtained for the complete basic set.

Convenient samples are created from the set units the selection of which is considered convenient.

Simple random sample is obtained when from the basic set of N value we take out samples of n elements so that each possible sample of n value has equal probability that it could be selected.

$$\text{Sample without replacement: } K = \binom{N}{n} = \frac{N!}{n!(N-n)!}$$

where K is the number of all different samples.

$$\text{Sample with replacement: } K = N^n$$

Stratum is obtained by dividing a set into a number of homogenous clearly distinctive subsets.

Stratified sample is selected when a simple random sample is selected from each stratum.

Cluster sample is created when instead of certain elements of the basic set we select groups of elements, so-called clusters.

If we do not include all elements of clusters in the sample but select at random some of them only, then we create so-called two-stage sample.

System sample is a random sample the elements of which are selected by certain systemic order, beginning from the random selected start.

Statistical estimation

Statistical inference is the process of inferring values of the basic set parameters from the information obtained from the sample.

Sample statistics that is applied to estimate an unknown parameter of a set is called parameter estimation.

Point estimation is a function represented by algebraic expression, and numeric value of this function is point estimated value of a set parameter.

$\hat{\theta}$ estimate is an unbiased estimation of ϑ parameter if its expected value is equal to ϑ parameter.

Estimate is consistent if with increasing the sample size it tends towards ϑ parameter.

Estimate is sufficient if it uses all information on the parameter that the sample may provide.

Statistical hypotheses testing

Statistical hypothesis is any assumption that reduces the family of admissible distributions.

Simple hypothesis is the hypothesis that single way determines the distribution of features.

Alternative hypothesis is the assumption that the feature X has the distribution belonging to the part of the family of admissible distributions that contains all distributions not covered by the same hypothesis.

Parameter hypothesis – statistical hypothesis that fixes the value and reduces the set of admissible values of certain parameters affecting the distribution.

Non-parameter hypothesis is the assumption that a distribution of features has a given type, not considering the values of parameters.

Statistical test is a rule that shall be applied in deciding whether a null hypothesis should be sustained as correct, or it should be rejected as false.

Index numbers

Relative variations of the observed phenomenon are expressed by indices, which represent relations between the phenomenon level in the observed period and the respective level in the base period.

Individual indices are relative changes of one phenomenon only.

Group indices represent the changes of several related phenomena.

Individual indices with constant base are calculated by taking a data from the series as a base, and putting the other data in relation to it.

Chain indices are individual indices with changeable or chain-linked base.

Index points represent the difference between two base indices.

Geometric mean of chain indices expresses the average, relative growth of a phenomenon in the observed period.

Price index:

$$I_p = \frac{\sum p_i}{\sum p_o}$$

p_o – price in base period,

p_i – price in referent period.

Quantity index:

$$I_q = \frac{\sum q_i}{\sum q_o}$$

q_o – quantity in base period,

q_i – quantity in referent period.

Value index:

$$I_{pq} = \frac{\sum p_i q_i}{\sum p_o q_o}$$

Mean arithmetic group index:

$$\bar{I} = \frac{\sum I \cdot \alpha}{\sum \alpha},$$

I – individual index,

α – weighted factor

Mean geometric group index:

$$\bar{I} = \sqrt[\alpha]{I_1^{\alpha_1} I_2^{\alpha_2} \dots I_n^{\alpha_n}}$$

Aggregate value index:

$$I_{pq} = \frac{\sum p_i q_i}{\sum p_o q_o}$$

Aggregate quantity index:

$$I_q = \frac{\sum q_i p_o}{\sum q_o p_o}$$

Aggregate price index:

$$I_p = \frac{\sum p_i q_o}{\sum p_o q_o}$$

Fisher price index:

Fisher price index:

$$I_p = \sqrt{\frac{\sum p_i q_o}{\sum p_o q_o} \cdot \frac{\sum p_i q_i}{\sum p_o q_i}}$$

Fisher quantity index:

Fisher quantity index:

$$I_p = \sqrt{\frac{\sum p_o q_i}{\sum p_o q_o} \cdot \frac{\sum p_i q_i}{\sum p_i q_o}}$$

Time series analysis

Time series variations are calculated by applying trend line that shows the average long-term movements of phenomenon and its secular trends.

Trend means the trends of development of an observed phenomenon in certain period, which resulted from the consistent factors that are long-term effective in certain direction.

Seasonal variations are the changes that are repetitive annually, at the same time and in the same direction.

Cyclic variations are alternative appearance of multi-annual deviations of an observed phenomenon above and below the average movements.

Information technology

Computer (Engl., from to compute = calculate) is an electronic computing machine. Due to its high fast computing capacity, the usage proved to be rather extensive. It operates in binary numeral system and the basic memory units are bit (possibly featuring two values, usually defined 0 and 1), byte = 8 bit (or 256 various 'combinations'), KB (kilobyte) = 2^{10} = 1024 byte, MB (megabyte) = 2^{10} = 1024 KB, GB (gigabyte) = 2^{10} = 1024 MB, TB (terabyte) = 2^{10} = 1024 GB. Information transfer speed measurements are the following: baud, = 1 bit/sec, *Kb* (kilobaud) = 1024 baud = 128 byte/sec. IBM company is believed to have made the greatest contribution to the 'democratization' of computers by introducing its PC, i.e. personal computer, the production of which started in 1981.

SORS has always been a leader in introducing new information technologies. The first computer, as assumed nowadays, in FNRY, was IBM 360, and it was installed at the Federal Statistical Office in Belgrade in 1960.

The first EARN node (European Academic Research Network) for Serbia was established at the Statistical Office of RS in 1987 and it was named and referred to as YUBGSS21. Even in those days EARN was connected to the international computer network, i.e. the internet presently.

The SORS is among few statistical institutions in the world featuring a fully operative, production-oriented and independently developed metadata driven system of the advanced technology, IST, which is employed for data entry, processing, analysis and publishing of statistics.

Official measurement units

1. SI units

1.1. SI base units

| Physical quantity | Unit | |
|---------------------------|----------|--------|
| | Name | Symbol |
| Length | meter | m |
| Mass | kilogram | kg |
| Time | second | s |
| Electric current | ampere | A |
| Thermodynamic temperature | kelvin | K |
| Amount of substance | mole | mol |
| Luminous intensity | candela | cd |

SI main units: Definitions

Linear unit

Meter, i.e. the length of path that light passes for the period of $1/299792458$ second.

Mass unit

Kilogram, i.e. equal to the mass of international kilogram prototype.

Time unit

Second, the period equal to 9192631770 radiation periods, corresponding to the transition between two hyper-fine levels of cesium-133 atom base state.

Electricity unit

Ampere, i.e. constant electricity that if maintained in two straight parallel conductors of unlimited length and negligible small round cross section, found in vacuum at a distance of one meter, would induce force between the conductors, equal to 2×10^{-7} newton per meter.

Thermodynamic temperature unit

Kelvin, i.e. thermodynamic temperature equal to $1/273.16$ thermodynamic temperature of the water 3-point.

Substance quantity/amount unit

1. Mole, i.e. substance amount of the system containing as many elementary units as is the number of atoms in 0.012 kg of carbon-12.
2. When mole is applied, expressed are elementary units such as atoms, molecules, ions, electrons and other particles or certain sets of particles.

Luminous intensity unit

Candela, i.e. luminous intensity in certain direction, of a source emitting monochromatic radiation of 540×10^{12} hertz frequency and whose radiation intensity in this direction equals to $1/683$ watt per steradian.

1.1.1. SI Celsius temperature unit

| Physical quantity | Unit | |
|---------------------|----------------|--------|
| | Name | Symbol |
| Celsius temperature | Degree Celsius | °C |

Celsius temperature is defined as a difference between two thermodynamic temperatures, T and T_0 ($t = T - T_0$), where $T_0 = 273.15$ K. The temperature interval or difference can be expressed in Kelvin or degrees Celsius values.

1.2. Other SI units

1.2.1. SI derived units

Units that are coherently derived from the SI base units are given as algebraic expressions in the form of product of powered SI base units.

1.2.2. SI derived units with special names

| | Unit | | Expressed in | |
|------------------------------------------------------------------------|---------|----------|----------------|-----------------------------------------------|
| | Name | Symbol | Other SI units | SI base units |
| Frequency | herz | Hz | | s^{-1} |
| Force | newton | N | | $m \cdot kg \cdot s^{-2}$ |
| Pressure | pascal | Pa | N / m^2 | $m^{-1} \cdot kg \cdot s^{-2}$ |
| Energy, work, heat qty. | joule | J | $N \cdot m$ | $m^2 \cdot kg \cdot s^{-2}$ |
| Power, (1) radiation flux | watt | W | J / s | $m^2 \cdot kg \cdot s^{-3}$ |
| Electric charge, electricity qty. | coulomb | C | | $s \cdot A$ |
| Electric potential, potential difference, voltage, electromotive force | volt | V | W / A | $m^2 \cdot kg \cdot s^{-3} \cdot A^{-1}$ |
| Electric resistance | ohm | Ω | V / A | $m^2 \cdot kg \cdot s^{-3} \cdot A^{-2}$ |
| Electric capacitance | farad | F | C / V | $m^{-2} \cdot kg^{-1} \cdot s^4 \cdot A^2$ |
| El. conductance | siemens | S | A / V | $m^2 \cdot kg^{-1} \cdot s^3 \cdot A^2$ |
| Magnetic flux | weber | Wb | $V \cdot s$ | $m^2 \cdot kg \cdot s^{-2} \cdot A^{-1}$ |
| Magnetic flux density | tesla | T | Wb / m^2 | $kg \cdot s^{-2} \cdot A^{-1}$ |
| Inductance | henry | H | Wb / A | $m^2 \cdot kg \cdot s^{-2} \cdot A^{-2}$ |
| Luminous flux | lumen | Lm | $cd \cdot sr$ | $m^2 \cdot m^{-2} \cdot cd = cd$ |
| Illumination | lux | Lx | Lm / m^2 | $m^2 \cdot m^{-4} \cdot cd = m^{-2} \cdot cd$ |

(1) Specific names for power unit are volt-ampere (VA), used to express apparent power of alternating current and var (symbol *var*), used to express reactive electric power.

1.2.2. SI derived units with special names (continued)

| | Unit | | Expressed in | |
|-----------------------------------------|-----------|--------|-------------------|--------------------------------------|
| | Name | Symbol | SI Other SI units | SI base units |
| Radioactivity | becquerel | Bq | | m^{-1} |
| Absorbed dose of ionizing radiation | gray | Gy | J / kg | $\text{m}^2 \cdot \text{s}^{-2}$ |
| Equivalent dose (of ionizing radiation) | sievert | Sv | J / kg | $\text{m}^2 \cdot \text{s}^{-2}$ |
| Catalytic activity | Kat | kat | | $\text{m}^{-1} \cdot \text{mol}$ |
| Plane angle (2) | radian | rad | | $\text{m} \cdot \text{m}^{-1} = 1$ |
| Solid angle (2) | steradian | sr | | $\text{m}^2 \cdot \text{m}^{-2} = 1$ |

(2) Unit of plane angle and unit of solid angle are derived units with dimension one.

Definition:

Plane angle unit

Radian, i.e. angle in plane equal to an angle at the centre of a circle the arc of which is equal in length to the radius.

Solid angle unit

Steradian, solid angle from the centre of a ball, covering on the ball surface a surface equal to the square surface determined by the radius of the ball ($1 \text{ sr} = 1 \text{ m}^2/\text{m}^2 = 1$).

1.3. Metric prefixes

| Factors | Prefixes | Symbol |
|-----------|----------|--------|
| 10^{24} | iota- | Y |
| 10^{21} | zeta- | Z |
| 10^{18} | exa- | E |
| 10^{15} | peta- | P |
| 10^{12} | tera- | T |
| 10^9 | giga- | G |
| 10^6 | mega- | M |
| 10^3 | kilo- | k |
| 10^2 | hecto- | h |
| 10^1 | deca- | da |

| Factors | Prefixes | Symbol |
|------------|----------|--------|
| 10^{-1} | deci- | d |
| 10^{-2} | centi- | c |
| 10^{-3} | milli- | m |
| 10^{-6} | micro- | μ |
| 10^{-9} | nano- | n |
| 10^{-12} | pico- | p |
| 10^{-15} | femto- | f |
| 10^{-18} | atto- | a |
| 10^{-21} | zepto- | z |
| 10^{-24} | iokto- | y |

Names and symbols of decimal multiples and parts of units are made by putting prefixes in the form of "meter" and the respective symbol in front of "m" symbol.

In case a derived unit is given as a quotient, the decimal multiples and parts thereof are made by adding prefix to numerator or denominator, or to both.

It is not possible to combine prefixes, i.e. to use several prefixes simultaneously.

1.4. Units with special names and symbols

| Physical quantity | Unit | | |
|-------------------|-------|--------|-----------------------------------------------------------|
| | Name | Symbol | Value |
| Volume | liter | l / L* | 1 l = 1 dm ³ = 10 ⁻³ m ³ |
| Mass | ton | t / t | 1 t = 1 Mg = 10 ³ kg |
| Pressure | bar | bar | 1 bar = 10 ⁵ Pa |

* Both l and L symbols can be used for the unit of litre.

See table 1.3. The units and symbols found in Table 1.4. can also be used.

2. Other SI derived units

| Physical quantity | Unit | | |
|-------------------|----------------|--------|------------|
| | Name | Symbol | Value |
| Plane angle | rotation* | | 1 rotation |
| | grad, gon | gon | |
| | degree (angle) | ° | |
| | minute (angle) | ' | |
| | second (angle) | " | |
| Time | minute | min | |
| | hour | h | |
| | day | d | |

Table 1.3. – Only used with “rad” and “gon” expressions and symbol “gon”.

3. Experimental SI unit values

| Physical quantity | Unit | | |
|-------------------|--------------------------|--------|---------------------------------------------------------------------------------------------------------|
| | Name | Symbol | Definition |
| Energy | Electron-volt | eV | Kinetic energy that electron receives while passing through potential difference of one volt in vacuum. |
| Mass | Unified atomic mass unit | u | Unified atomic mass unit is equal to 1/12 of atom C ¹² mass. |

Names and symbols as in Table 1.3. can be used with two units and symbols defined in Table 3.

4. Specific units

| Physical quantity | Unit | | |
|-------------------------------------------|-------------------------------|--------|-----------------------------------------------|
| | Name | Symbol | Value |
| Refractive power | Dioptre | | 1 dioptre = 1 m ⁻¹ |
| Precious stone mass | Carat | | 1 carat = 2 × 10 ⁻⁴ kg |
| Land area | Are | a | 1 a = 100 m ² |
| | Hectare | ha | 1 ha = 10 ⁴ m ² |
| Length mass of textile fibre, i.e. thread | Tex | tex | 1 tex = 10 ⁻⁶ kg · m ⁻¹ |
| Blood and other body fluids pressure | Mercury level bulb millimetre | mm Hg | 1 mm Hg = 133.32 Pa |
| Effective section | Barn | b | 1b = 10 ⁻²⁸ m ² |

Names and symbols as in Table 1.3. can be used with the units and symbols described in Table 4, except for “millimetre of mercury level bulb” and the respective symbol.

Examples of measurements ¹⁾

Square measure – square meter (m²)

Smaller:

$$1 \text{ m}^2 = 100 \text{ dm}^2$$

$$1 \text{ dm}^2 = 100 \text{ cm}^2$$

$$1 \text{ cm}^2 = 100 \text{ mm}^2$$

Larger:

$$1 \text{ km}^2 = 100 \text{ ha}$$

$$1 \text{ ha} = 100 \text{ a}$$

$$1 \text{ a} = 100 \text{ m}^2$$

Cubic measure – cubic metre (m³)

Smaller:

$$1 \text{ m}^3 = 1000 \text{ dm}^3$$

$$1 \text{ dm}^3 = 1000 \text{ cm}^3$$

$$1 \text{ cm}^3 = 1000 \text{ mm}^3$$

Linear measure

$$1 \text{ km (kilometre)} = 100 \text{ dkm} = 1000 \text{ m}$$

$$1 \text{ hm (hectometre)} = 10 \text{ dkm} = 100 \text{ m}$$

$$1 \text{ m (meter)} = 10 \text{ dm} = 100 \text{ cm} = 1000 \text{ mm}$$

$$1 \text{ dm (decimetre)} = 10 \text{ cm} = 100 \text{ mm}$$

$$1 \text{ cm (centimetre)} = 10 \text{ mm}$$

$$1 \text{ angstrom (A)} = 0.1 \text{ mill microns}$$

Capacity measure

$$1 \text{ hl (hectolitre)} = 1000 \text{ dl} = 10000 \text{ cl}$$

$$1 \text{ l (litter)} = 10 \text{ dl} = 100 \text{ cl} = 1000 \text{ ml}$$

$$1 \text{ dl (decilitre)} = 10 \text{ cl} = 100 \text{ ml}$$

$$1 \text{ cl (centilitre)} = 10 \text{ ml}$$

Weight

$$1 \text{ wagon} = 10 \text{ tonne} = 10000 \text{ kg}$$

$$1 \text{ tonne (metric ton)} = 10 \text{ q} = 1000 \text{ kg}$$

$$1 \text{ q (cent)} = 100 \text{ kg}$$

$$1 \text{ kg} = 10 \text{ hg} = 1000 \text{ g}$$

$$1 \text{ hg (hectogram)} = 10 \text{ dkg} = 100 \text{ g}$$

$$1 \text{ dkg (decagram)} = 10 \text{ g}$$

$$1 \text{ g (gram)} = 1/1000 \text{ kg}$$

$$1 \text{ cg (centigram)} = 1/100 \text{ g}$$

$$1 \text{ mg (milligram)} = 1/1000 \text{ g}$$

$$1 \text{ carat (precious stones)} = 200 \text{ mg}$$

¹⁾ Logarithm tables.

Old measures

1 m = 0.527 *hvat*; 1 m² = 0.278 sq. *hvat*

1 m³ = 0.147 cubic *hvat*

1 ha = 1.74 *jutro* = 2780 sq. *hvat*

1 dunum = 1000 m² = 0.1 ha

1 *hvat* = 1.896 m; 1 sq. *hvat* = 3.597 m²

1 cubic *hvat* = 6.821 m³

1 *jutro* = 1600 sq. *hvat* = 5755 m² = 0.576 ha

1 *lanac* = 2 000 sq. *hvat* = 7192 m² = 0.719 ha

British (imperial) measures with metric equivalents

vice versa

Linear measure

1 nautical mile = 1.853 km

1 km = 0.54 nautical mile

1 mile = 1.609 km 1 km = 0.621 mile

1 chain = 20.116 m; 1 m = 0.05 chain

1 yard = 0.914 m; 1 m = 1.094 yard

1 foot = 0.305 m; 1 m = 3.281 foot

1 inch = 2.54 cm; 1 cm = 0.394 inch

Square measure

1 sq. mile = 2.59 km²

1 km² = 0.386 sq. mile

1 acre = 0.405 ha

1 ha = 2.471 acre

1 sq. yard = 0.836 m²

1 m² = 1.196 sq. yard

1 sq. foot = 0.093 m²

1 m² = 10.764 sq. foot

1 sq. inch = 6.452 cm²

1 cm² = 0.155 sq. inch

Capacity measure

1 British bushel = 36.348 l

1 l = 0.0275 Brit. bushel

1 American bushel = 35.239 l

1 l. = 0.0284 Am. bushel

1 Brit. gallon = 4.546 l

1 l = 0.22 Brit. gallon

1 Am. gallon = 3.785 l

1 l = 0.264 Am. gallon

1 l = 0.264 Am. gallon

1 Brit. quart = 1.137 l

1 l = 0.88 Brit. quart

1 Am. quart = 0.946 l

1 l = 1.057 Am. quart

1 cubic yard = 0.765 m³

1 m³ = 1.308 cubic yard

1 cubic foot = 0.028 m³

1 m³ = 35.315 cubic foot

1 cubic inch = 16.387 cm³

1 cm³ = 0.061 cubic inch

Weight

1 long ton = 1.016 tonnes

1 tonne = 0.984 long ton

1 short ton = 0.907 tonne

1 tonne = 1.102 short ton

1 pound = 0.454 kg

1 kg = 2.205 pound

1 ounce = 28.35 g

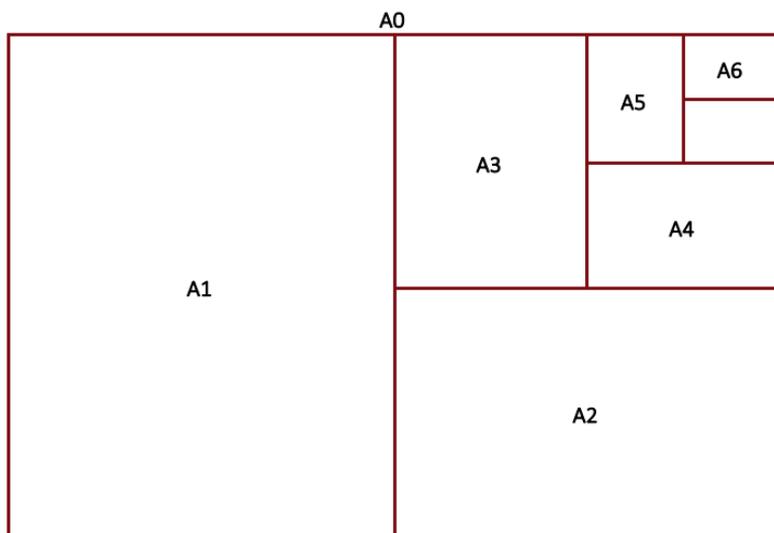

1 g = 0.035 ounce

Paper sizes

mm

| A size | | B size | | C size | |
|--------|------------|--------|-------------|--------|------------|
| A0 | 841 × 1189 | B0 | 1000 × 1414 | C0 | 917 × 1297 |
| A1 | 594 × 841 | B1 | 707 × 1000 | C1 | 648 × 971 |
| A2 | 420 × 594 | B2 | 500 × 707 | C2 | 458 × 648 |
| A3 | 297 × 420 | B3 | 353 × 500 | C3 | 324 × 458 |
| A4 | 210 × 297 | B4 | 250 × 353 | C4 | 229 × 324 |
| A5 | 148 × 210 | B5 | 176 × 250 | C5 | 162 × 229 |
| A6 | 105 × 148 | B6 | 125 × 176 | C6 | 114 × 162 |
| A7 | 74 × 105 | B7 | 88 × 125 | C7 | 81 × 114 |
| A8 | 52 × 74 | B8 | 62 × 88 | C8 | 57 × 81 |
| A9 | 37 × 52 | B9 | 44 × 62 | C9 | 40 × 87 |

Chemical elements

| Atomic number | Name | Chemical symbol | Relative atomic mass | Type of element |
|---------------|------------|-----------------|----------------------|-----------------|
| 1 | Hydrogen | H | 1.01 | gas |
| 2 | Helium | He | 4.00 | noble gas |
| 3 | Lithium | Li | 6.94 | solid |
| 4 | Beryllium | Be | 9.01 | solid |
| 5 | Boron | B | 10.82 | solid |
| 6 | Carbon | C | 12.01 | solid |
| 7 | Nitrogen | N | 14.01 | gas |
| 8 | Oxygen | O | 16.00 | gas |
| 9 | Fluorine | F | 19.00 | gas |
| 10 | Neon | Ne | 20.18 | noble gas |
| 11 | Sodium | Na | 23.00 | solid |
| 12 | Magnesium | Mg | 24.32 | solid |
| 13 | Aluminium | Al | 26.98 | solid |
| 14 | Silicon | Si | 28.09 | solid |
| 15 | Phosphorus | P | 30.89 | solid |
| 16 | Sulphur | S | 32.07 | solid |
| 17 | Chlorine | Cl | 35.46 | gas |
| 18 | Argon | Ar | 39.94 | noble gas |
| 19 | Potassium | K | 39.10 | solid |
| 20 | Calcium | Ca | 40.08 | solid |
| 21 | Scandium | Sc | 44.96 | solid |
| 22 | Titanium | Ti | 47.88 | solid |
| 23 | Vanadium | V | 50.94 | solid |
| 24 | Chromium | Cr | 52.00 | solid |
| 25 | Manganese | Mn | 54.94 | solid |
| 26 | Iron | Fe | 55.85 | solid |
| 27 | Cobalt | Co | 58.93 | solid |
| 28 | Nickel | Ni | 58.69 | solid |
| 29 | Copper | Cu | 63.55 | solid |
| 30 | Zinc | Zn | 65.38 | solid |
| 31 | Gallium | Ga | 69.72 | solid |
| 32 | Germanium | Ge | 72.59 | solid |
| 33 | Arsenic | As | 74.92 | solid |
| 34 | Selenium | Se | 78.96 | solid |
| 35 | Bromine | Br | 79.90 | liquid |
| 36 | Krypton | Kr | 83.80 | noble gas |
| 37 | Rubidium | Rb | 85.47 | solid |
| 38 | Strontium | Sr | 87.62 | solid |
| 39 | Yttrium | Y | 88.91 | solid |

Chemical elements (continued)

| Atomic number | Name | Chemical symbol | Relative atomic mass | Type of element |
|---------------|-------------------------|-----------------|----------------------|-----------------|
| 40 | Zirconium | Zr | 91.22 | solid |
